Version: 1.1

1 Foreword

1.1 Notes on the documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with applicable national standards.

It is essential that the documentation and the following notes and explanations are followed when installing and commissioning the components.

It is the duty of the technical personnel to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without prior announcement.

No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

Trademarks

Beckhoff®, TwinCAT®, TwinCAT/BSD®, TC/BSD®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered trademarks of and licensed by Beckhoff Automation GmbH.

Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

Patent Pending

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:

EP1590927, EP1789857, EP1456722, EP2137893, DE102015105702

with corresponding applications or registrations in various other countries.

EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

Copyright

© Beckhoff Automation GmbH & Co. KG, Germany.

The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization are prohibited.

Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.

1.2   Safety instructions

Safety regulations

Please note the following safety instructions and explanations!
Product-specific safety instructions can be found on following pages or in the areas mounting, wiring, commissioning etc.

Exclusion of liability

All the components are supplied in particular hardware and software configurations appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

Personnel qualification

This description is only intended for trained specialists in control, automation and drive engineering who are familiar with the applicable national standards.

Description of symbols

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

⚠ DANGER
Serious risk of injury!
Failure to follow the safety instructions associated with this symbol directly endangers the life and health of persons.

⚠ WARNING
Risk of injury!
Failure to follow the safety instructions associated with this symbol endangers the life and health of persons.

⚠ CAUTION
Personal injuries!
Failure to follow the safety instructions associated with this symbol can lead to injuries to persons.

NOTE
Damage to the environment or devices
Failure to follow the instructions associated with this symbol can lead to damage to the environment or equipment.

Tip or pointer

This symbol indicates information that contributes to better understanding.

1.3 Notes on information security

The products of Beckhoff Automation GmbH & Co. KG (Beckhoff), insofar as they can be accessed online, are equipped with security functions that support the secure operation of plants, systems, machines and networks. Despite the security functions, the creation, implementation and constant updating of a holistic security concept for the operation are necessary to protect the respective plant, system, machine and networks against cyber threats. The products sold by Beckhoff are only part of the overall security concept. The customer is responsible for preventing unauthorized access by third parties to its equipment, systems, machines and networks. The latter should be connected to the corporate network or the Internet only if appropriate protective measures have been set up.

In addition, the recommendations from Beckhoff regarding appropriate protective measures should be observed. Further information regarding information security and industrial security can be found in our https://www.beckhoff.com/secguide.

Beckhoff products and solutions undergo continuous further development. This also applies to security functions. In light of this continuous further development, Beckhoff expressly recommends that the products are kept up to date at all times and that updates are installed for the products once they have been made available. Using outdated or unsupported product versions can increase the risk of cyber threats.

To stay informed about information security for Beckhoff products, subscribe to the RSS feed at https://www.beckhoff.com/secinfo.

2   Overview

The TwinCAT Management Server enables the central administration of Beckhoff controllers. Software updates can be applied conveniently from a central location in a network. In addition to the option of switching selected devices to a different operating mode or restarting them remotely, the TwinCAT Management Server enable full operating system updates to be generated.

The TwinCAT Management Server enables network devices to be grouped into logical groups. For each group actions can be defined which are then executed by the respective devices. Basic actions such as copying, deleting or renaming files and folders are available in the form of scripts. The basic actions can be consolidated into complex update scenarios and used in dedicated scripts via the script editor.

Requirements

The TwinCAT Management Server runs on all Beckhoff devices except the

- Beckhoff CX9000 Embedded PC

The product therefore runs on all platforms that offer the following components:

- Minimum TwinCAT CP

Notice:
Updates are currently not available for devices running Windows XP or Windows XP Embedded. This functionality is currently still in development.

Installation

The installation consists of 2 steps:

Step 1: Install the Supplement Software on a host PC. Once the required licence key has been entered and the user has indicated acceptance of the licence agreement, the Supplement Software is installed under .\TwinCAT\TwinCAT Management Server. The installation files for Windows CE are stored in the subfolder ..\TwinCAT\CE on your PC.

Example: TwinCAT Management Server : During the software installation on the host PC the folder "..TwinCAT\CE\TwinCAT Management Server" is created which contains the CE *.cab installation files, e.g. (TcManagementServerCe.X86.CE500.CAB).**Step 2:**Transfer of the CE Cab installation files to the CE device (via memory stick/FTP/Public folder/CF adapter...) While the CE device is running, double-click on the Cab file, then click OK without changing the path. After the installation the Cab file will delete itself.
After the installation restart the CE system by executing the function Reset or Suspend via the Start menu in order to activate the server.

Installation on the host PC:

- CE *.cab installation files in folder "..TwinCAT\CE\TwinCAT Management Server"
- XP configuration files in folder "..\TwinCAT\TwinCAT Management Server"

Installation on the CE device:

- "\Hard Disk\System"
  - TcManagementService.exe

- ◦ TcManagementSystem.dll
- ◦ TcAmsServerCe.dll
- ◦ TwinCAT.Ads.dll
- ◦ TwinCAT.Ads.Server.dll

BECKHOFF

3 User interface
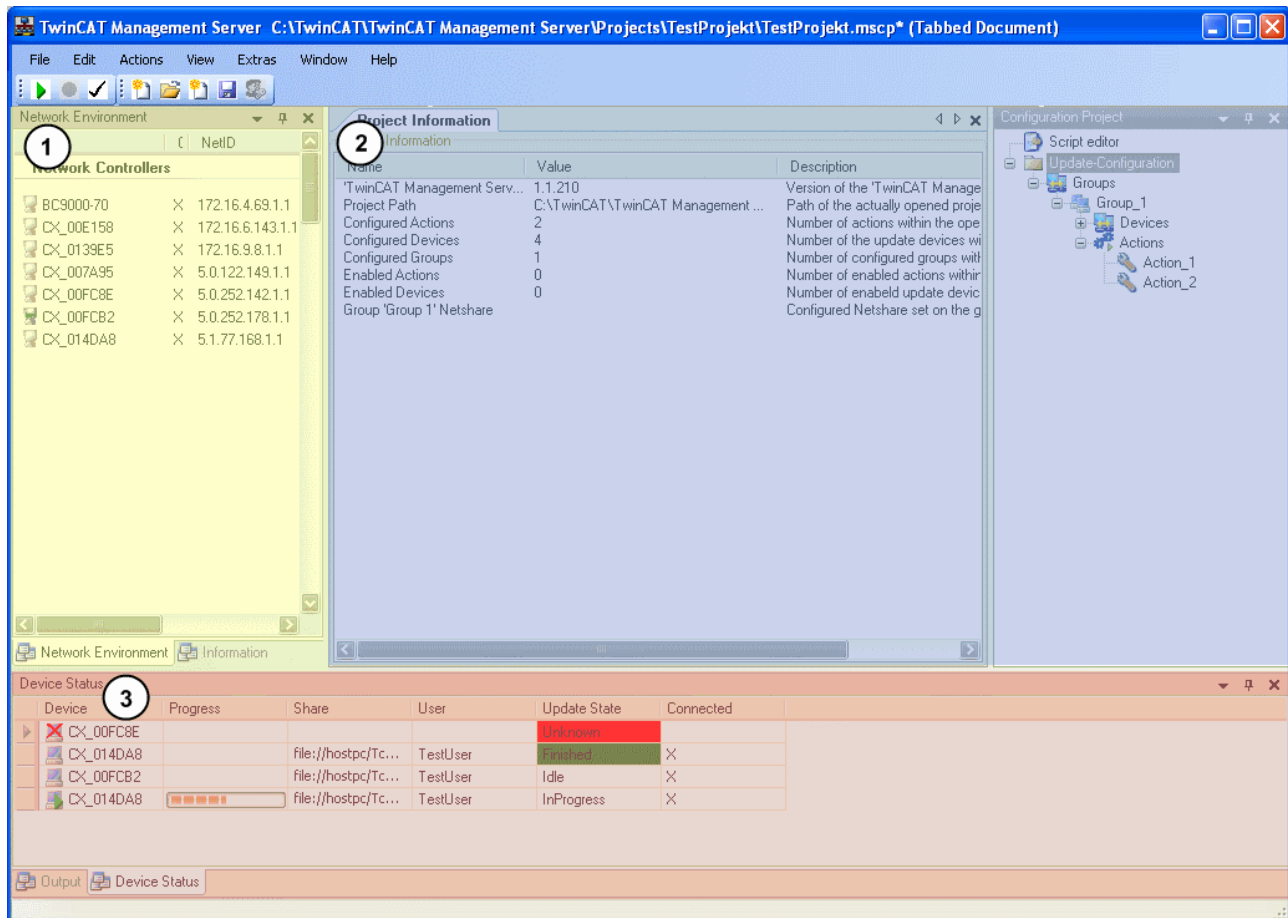

Fig. 1: TcManagementConfigurator_Struct

[▶ 10] ①	**Network Environment:** Includes all devices found in a network. For further information see: Network Environment [▶ 10]
[▶ 12] ②	**Configuration Project:** Includes all configurable components of an update project. For further information see: Project Configuration [▶ 12]
[▶ 17] ③	**Device Status:** Includes all devices used in the different groups. For further information see: Device Status [▶ 17]

3.1 Network Environment

In the network environment all devices are listed that were found in the network. Devices which have an ADS route on your PC are identified with an X in column "Connected". The NetID, IP address, TwinCAT version and the operating system of the devices that are found are also listed.

The small symbols on the left-hand side indicate which devices are available, available and associated with a route, or not available. The device status can be updated at any time via "Refresh". See below for further details of the "Refresh" procedure.

Name	Route	NetID	IP	Version	OS
Network Controllers					
✗ BC9000-70	✗	172.16.4.69.1.1	172.16.4.69	0.0	Unknown
CX_00E158		172.16.6.143.1.1	172.16.6.143	0.0	Unknown
CX_0139E5		172.16.9.8.1.1	172.16.9.8	0.0	Unknown
CX_007A95		5.0.122.149.1.1	172.16.7.48	0.0	Unknown
CX_00FC8E	✗	5.0.252.142.1.1	172.16.15.12	2.10.1340	CE6.0
CX_00FCB2	✗	5.0.252.178.1.1	172.16.7.235	2.10.1340	CE6.0
CX_014DA8	✗	5.1.77.168.1.1	172.16.11.140	2.10.1340	CE6.0
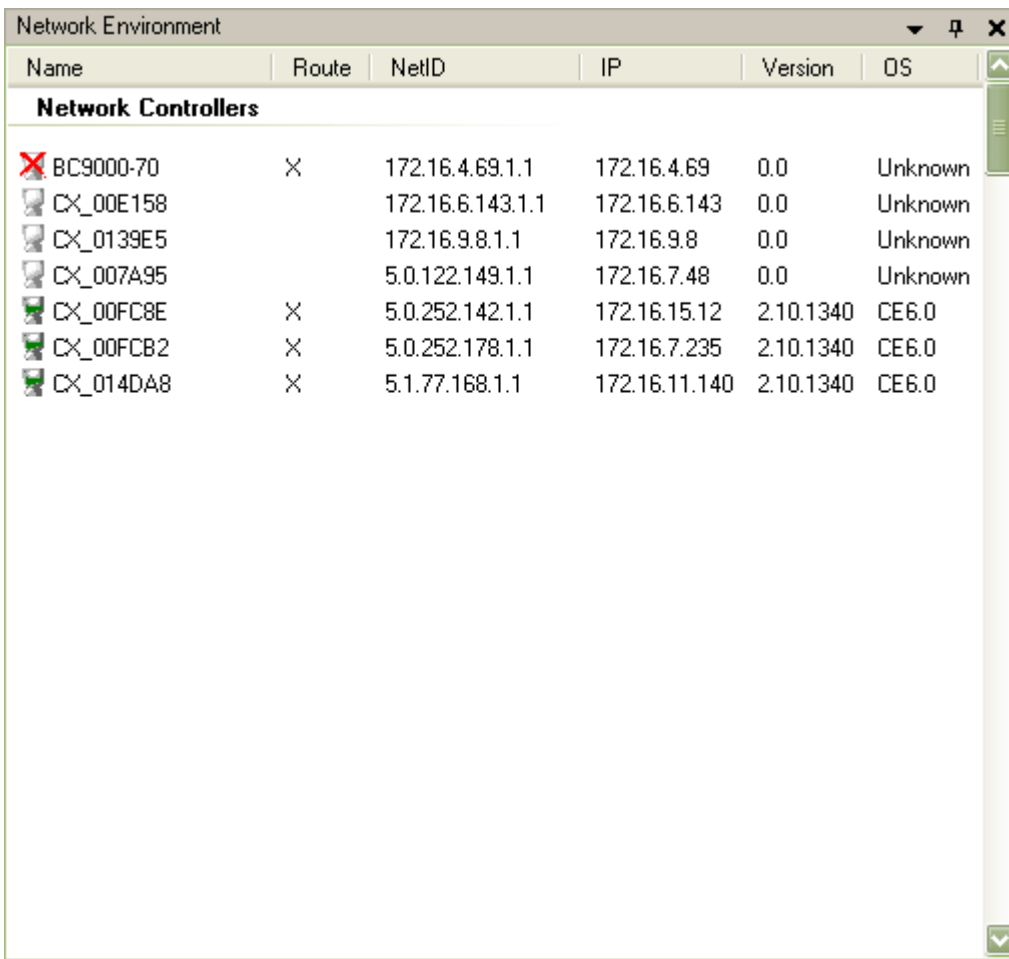

Fig. 2: NetworkEnvironment

Context menu

The context menu may vary, depending on the status of the selected device. The following diagram shows all possible context options.

Requirements

	Context menu item	Description
	WebConfiguration ...	TcWebAccess: Web-based diagnostics and configuration interface. The main device settings can be implemented here
	Remote Desktop ...	This option enables remote control of CE devices.
	Ping	Checks whether the selected device is accessible in the IP network.
	AdsPing	Checks whether the selected device is accessible in the network via ADS.
	Edit Remote Process commands ...	A further dialog enables editing of processes that are to be started on the selected device. The created processes can be started quickly and conveniently from the context menu.
	Start Remote Process ...	Starts processes on the selected device

Context menu item	Description
ShutDown ...	Shuts down the selected device.
Config mode ...	Switches the TwinCAT system of the selected device to Config mode.
Restart System ...	Restarts the TwinCAT systems on the selected device.
Show target routes ...	Lists the configured Sub ADS routes for the selected device in a new dialog.
Remove route ...	If a route exists on the host PC for the selected device it can be deleted with this menu item.
Find Targets ...	A new dialog enables explicit searches for further devices.
Refresh	Refreshes the list of devices and their status.
Properties ...	Lists TwinCAT, image, and hardware information for selected device, if possible.

3.2 Project Configuration

Different devices groups can be created and managed under Project Configuration. Different devices from your network can be allocate to these groups, and stored actions can be executed on the individual devices of a group with the *Update* command. The script editor offers scope for user-defined, complex scripts in addition to the predefined scripts.
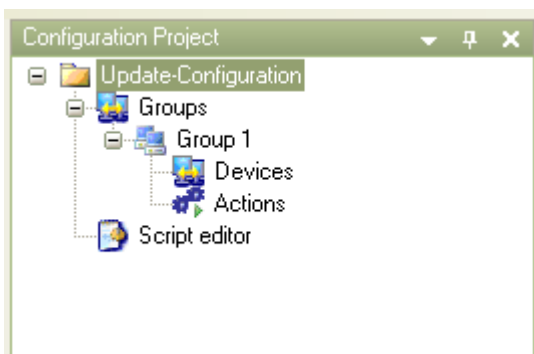

The first and main step is to select the so-called NetShare folder. The files (file paths) to be loaded onto the target system(s), which are specified in the different scripts, are consolidated in the NetShare folder and issued centrally from this here to the devices in the respective group. The following diagram illustrates this principle.
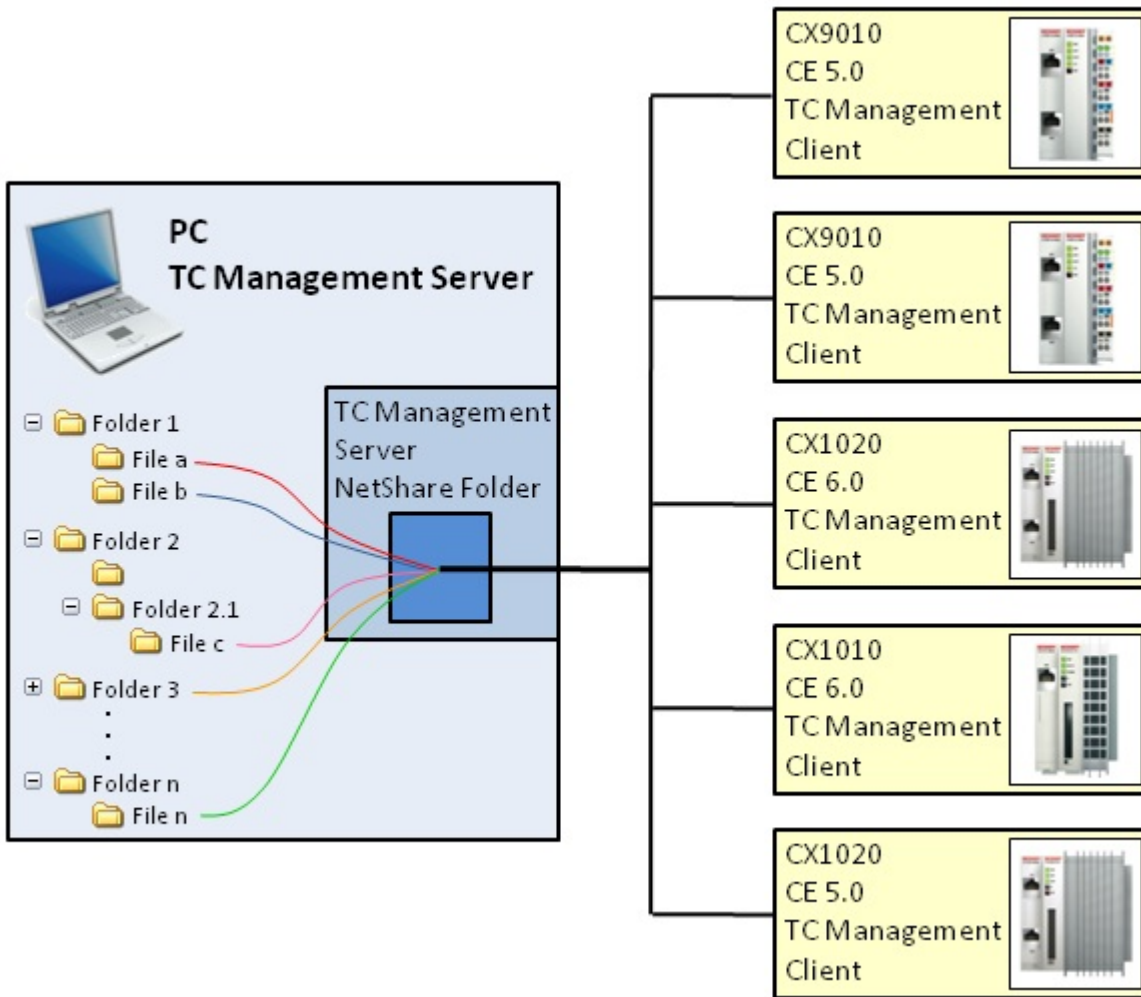

To implement the settings select Groups in the configuration tree (see the diagram in section: *Groups*). The NetShare folder must be an enabled folder with write and read access.

Enter the Windows user name and the password to gain access to the NetShare folder. Use the *Test* button to check whether access rights are available. All changes on this page must be explicitly confirmed via the *Apply* button. Otherwise the changes will not take effect and are discarded.

Use the *Start Update* button to initiate an update for all activated devices in the currently selected group.
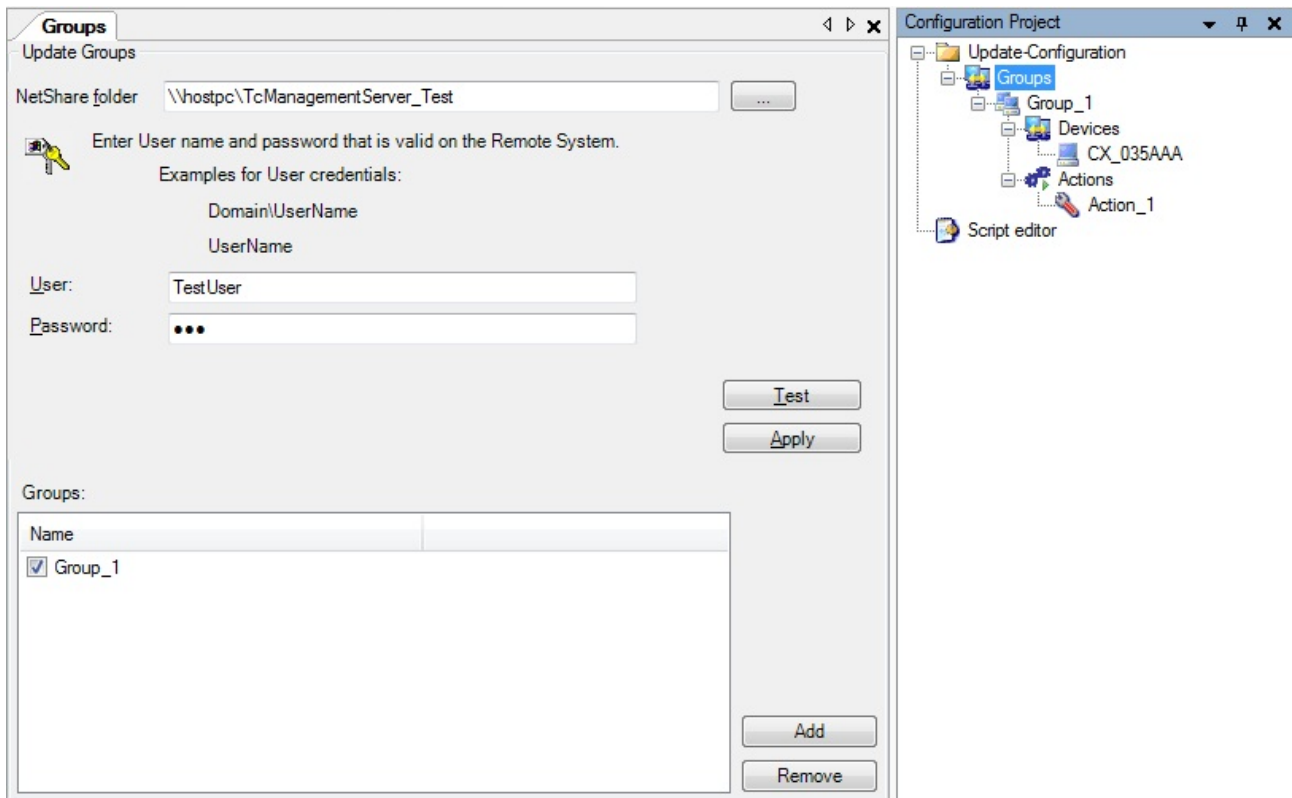

Groups, Devices and Actions:

The Groups entry also provides an overview of the groups that have already been created in the Project Configuration. Further groups can be added via the Add button or by right-clicking on *New* in the configuration tree context menu. Groups can be activated and deactivated through checkboxes in the Groups window.
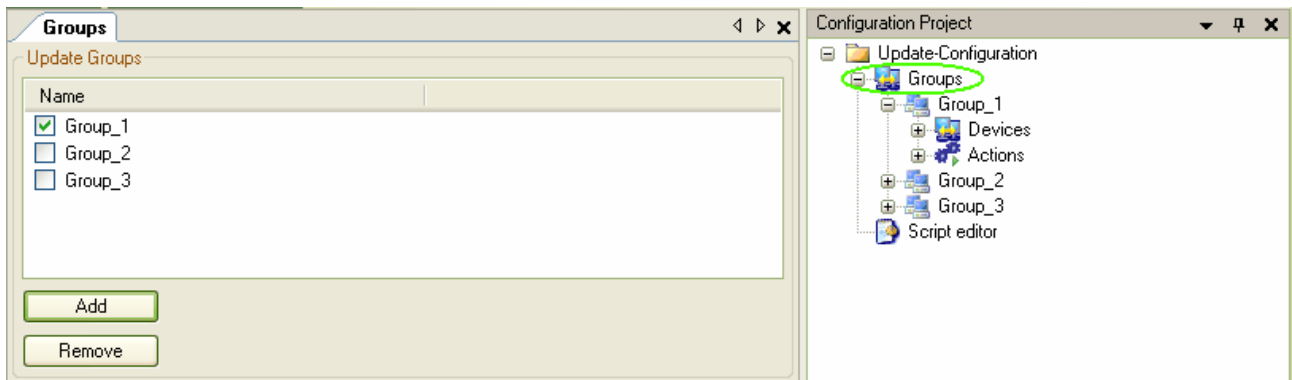

The procedure for devices within a group is similar. Open the Devices window for the respective group by clicking on *Devices*. Devices can be added via the context menu of the Project Configurator, via the Add button in the Devices window, or very conveniently through drag and drop from your *Network Environment* into the Devices window.
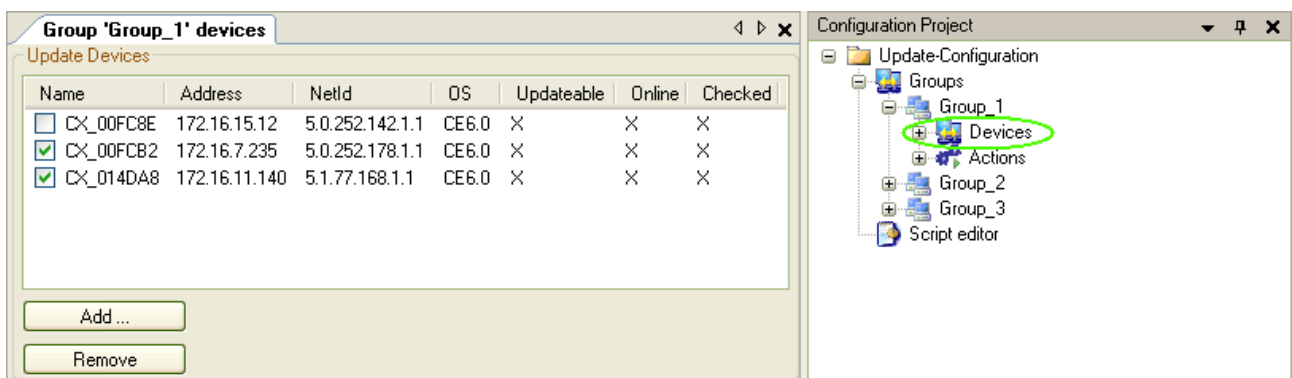

The procedure for *Actions* is similar, which makes the software operation very intuitive. Individual actions for certain updates can be switched on or off.
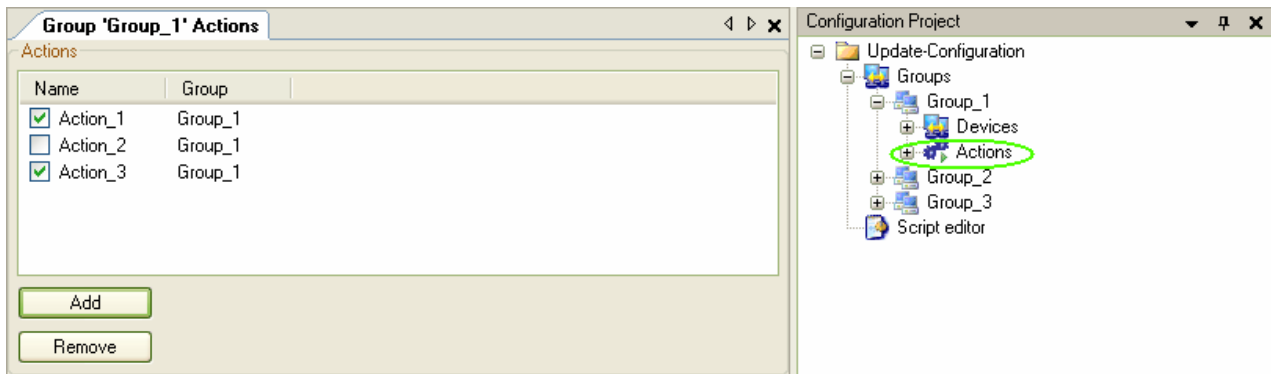

As an example, in the three images shown above the next update is only carried out for *Group_1* and its embedded devices *CX_00FCB2* and *CX_014DA8* with *Action_1* and *Action_3*.

Selecting individual devices in a group will provide an overview with information on the respective device, showing the name, NetId, IP, TwinCAT version and the operating system of the device, among others. From here you can initiate or cancel updates for the currently selected device. A device-specific logger provides detailed information on the current device status.
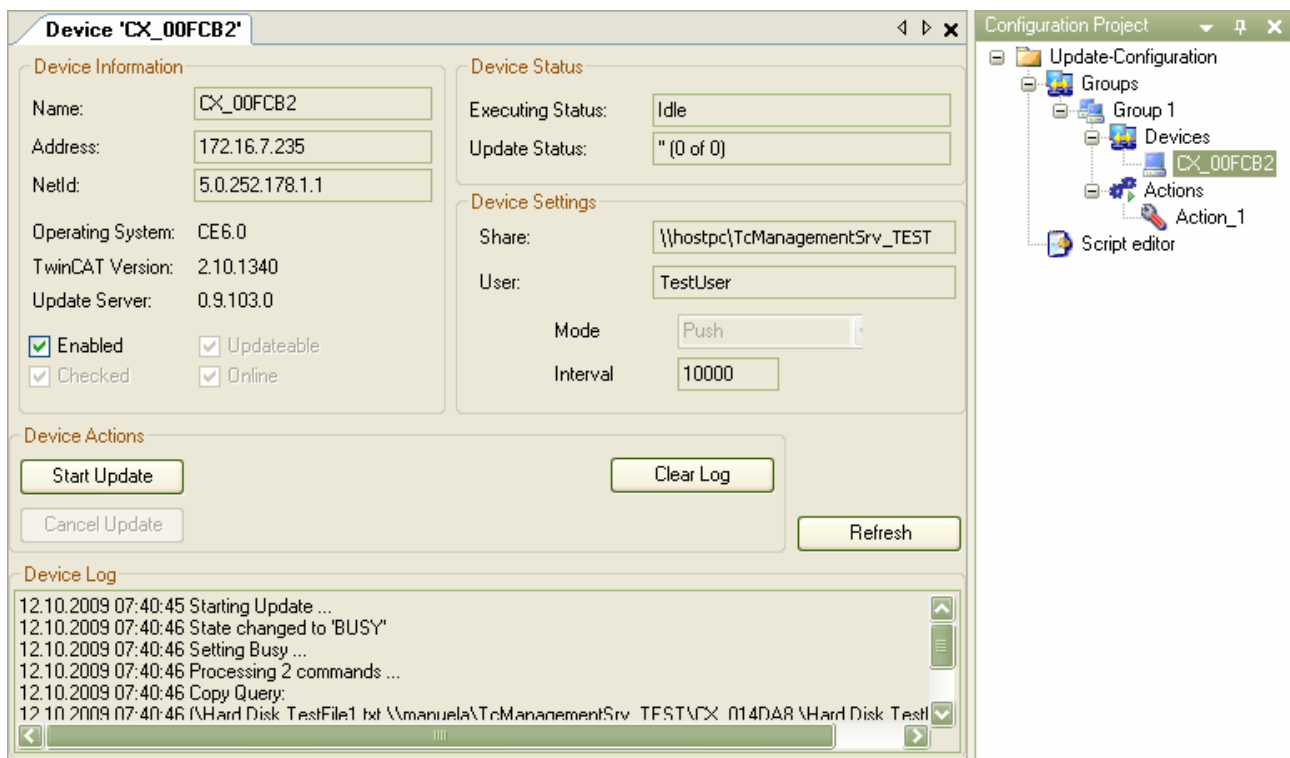

When adding actions to your existing configuration of groups and devices, you can choose between several standard scripts. These scripts can be used to specify, what exactly should be done or executed on the target device(s). Click here [▶ 18] to find out which standard scripts are available and what their functions are.
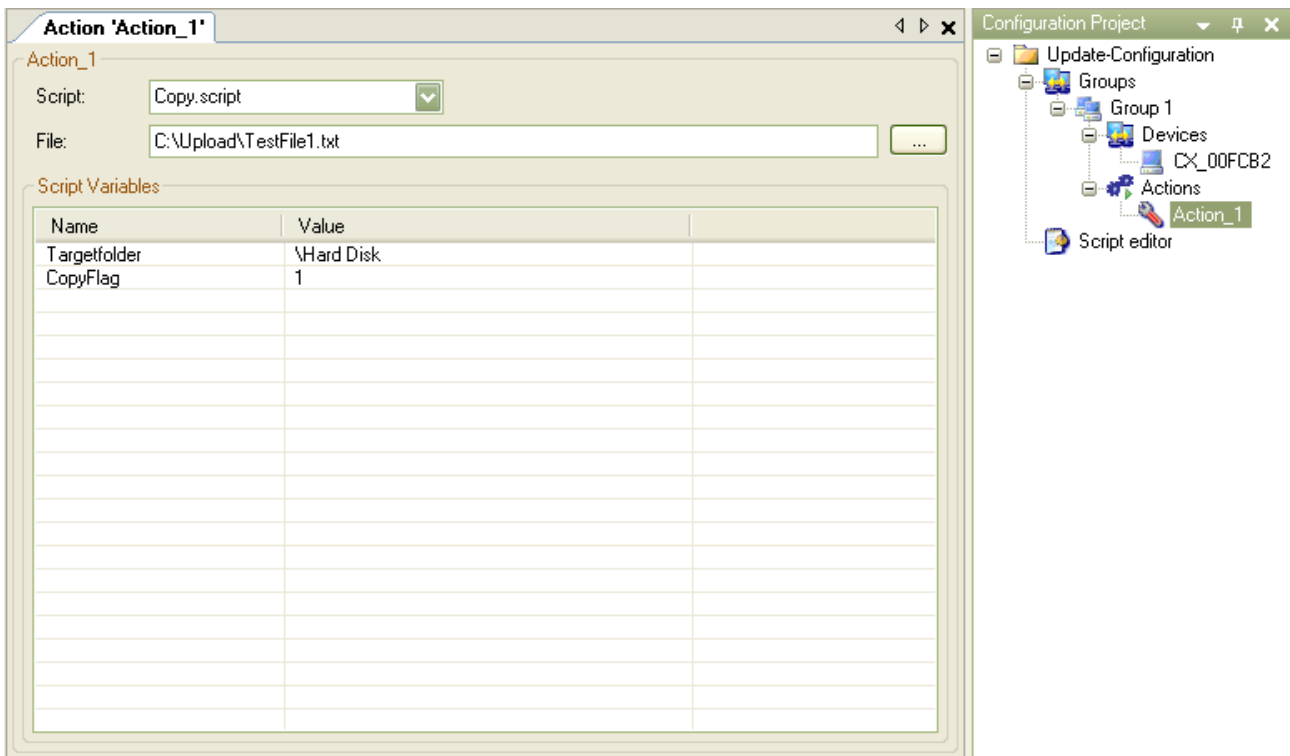

A script editor is available if the available scripts are insufficient for your requirements, or if you want to define a complex script for executing several functions at the same time. Click here [▶ 29] to find out how to write, save and use such scripts.
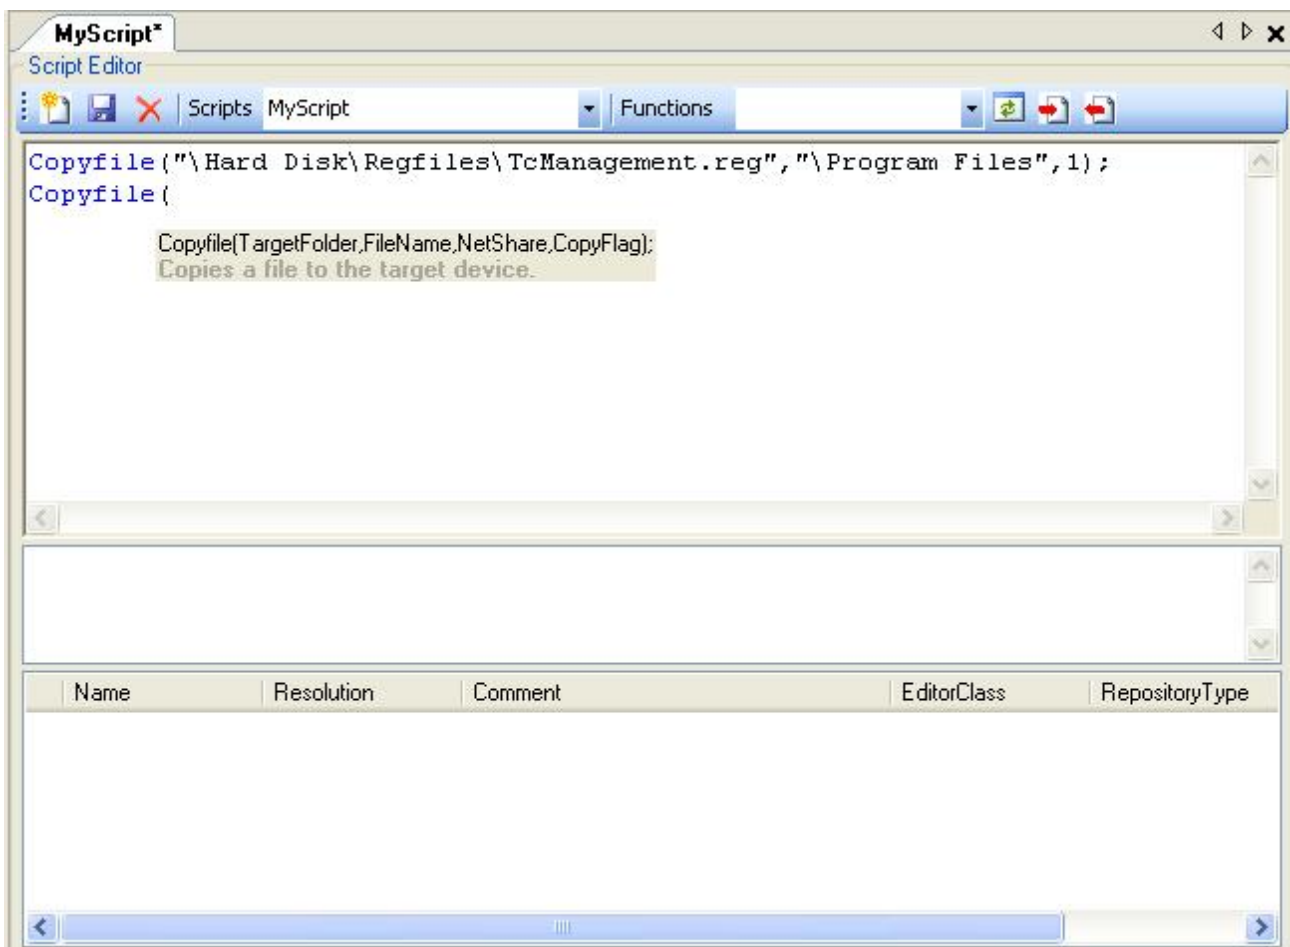

3.3   Device status
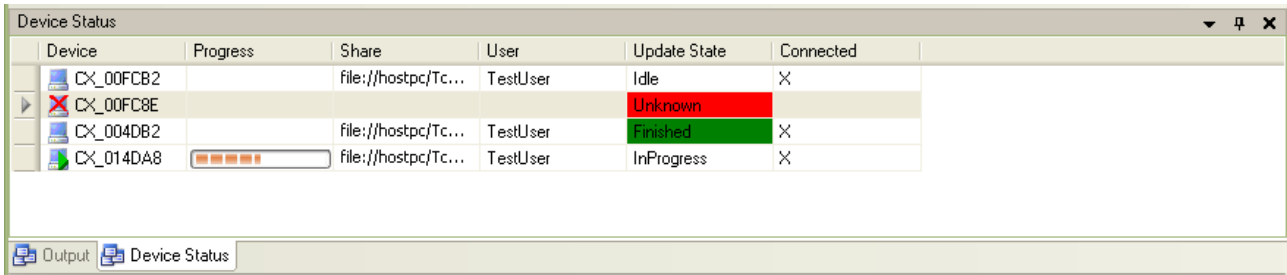

Fig. 3: DeviceStatus

This window provides an overview of the status of the declared devices and can be used to monitor the progress of the triggered updates. The overview shows each device from each group. It also shows briefly which users and Netshare folders are allocated to the individual devices and the current device status.

The displayed values may differ from the actual values. In this case simply use the "Refresh" function in the context menu to update the values.

Column "Update State"

The column "Update State" can display up to 5 different states:

Requirements

Status	Description
Idle	Device is ready for updates (always appears after the device has been started/restarted)
Timout (highlighted in Yellow)	Client software of the TwinCAT Management Server is not installed on the device (CE installation file *.cap was not executed on the device) or the device is currently not accessible.
Error (highlighted in red)	An error occurred during the update. A more detailed error description can be found in the "Device Log" for the respective device.
Finished (highlighted in green)	The update was successful. The device is ready for further updates.
InProgress	The device is currently being updated.

Column "Connected"

Column "Connected" indicates whether the device is accessible via ADS, whether the client software of the TwinCAT Management Server is installed on the device, and whether or not the device is included in an update for its group.

4   Scripts

Various actions can be defined for operating the TwinCAT Management Server. These actions are based on so-called scripts. Certain standard scripts are available, which are described below.

The following standard scripts are currently available:

Script	Description
CopyFile Script [▶ 18]	Copies a file to the remote device.
CopyFolder Script [▶ 19]	Copies a folder to the remote device
CX10xxImageUpdate Script [▶ 20]	Carries out an image update on all x86 CX devices
CX90xxImageUpdatePrep Script [▶ 20]	Updates the system files and rests the device settings
CX90xxImageUpdate.Script [▶ 21]	Carries out an image update on a CX ARM device
DeleteFile Script [▶ 22]	Deletes a file on the remote device.
DeleteFolder Script [▶ 23]	Deletes a folder on the remote device
Register Script [▶ 25]	Copies a registry file to the remote device and executes it.
ExportRegistry Script [▶ 24]	Writes a registry key to a registry file on the remote device.
RenameFile Script [▶ 26]	Renames a file on the remote device.
RenameFolder Script [▶ 27]	Renames a folder on the remote device.
Restart Script [▶ 28]	Executes a restart on the remote device
Run Script [▶ 28]	Starts a certain process on the remote device

Beyond the standard scripts you can define your own scripts. Click here [▶ 29] to find out how to do this.

4.1   "CopyFile.script"

The "CopyFile.script" can be used to copy files from your local host PC to the defined devices at a certain position. The copy function offers various copy options which you can select as required. The different options are described in the table below.
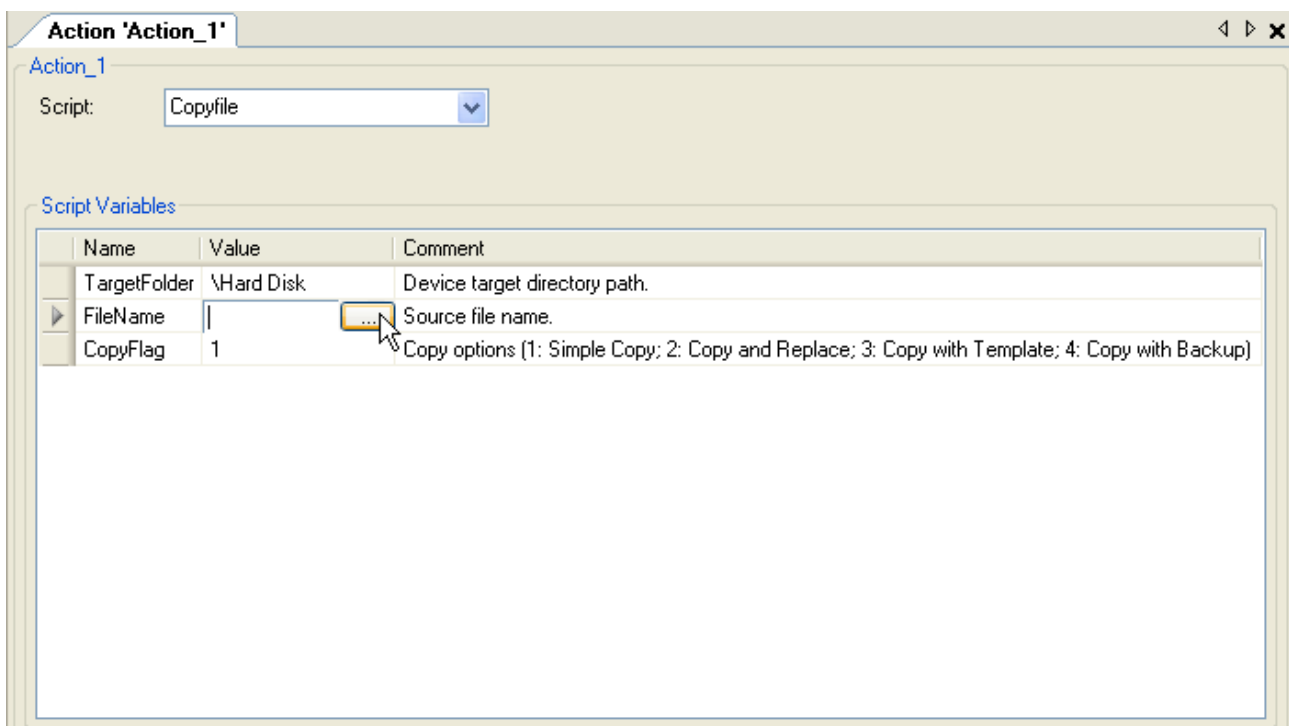

Script variables

Targetfolder:
The "Targetfolder" contains the path on the device into which the selected file is to be copied.

Filename:
Please specify the local path for the file to be copied under "Filename". Use the button to the right of the text field.

CopyFlag:
The "CopyFlag" contains the copy options, which you can select as required. The following table shows all available options.

0	Simple copying of a file.
1	Copying fails if the file already exists.
2	First creates a template for the file, before it is used. This procedure is recommended in a situation with poor connections, in order to prevent copying of incomplete files.
4	Creates a backup of the old file.

4.2 "CopyFolder.script"

The "CopyFolder.script" can be used to copy folders from your local host PC to the defined devices at a certain position. The copy function offers various copy options which you can select as required. The different options are described in the table below.
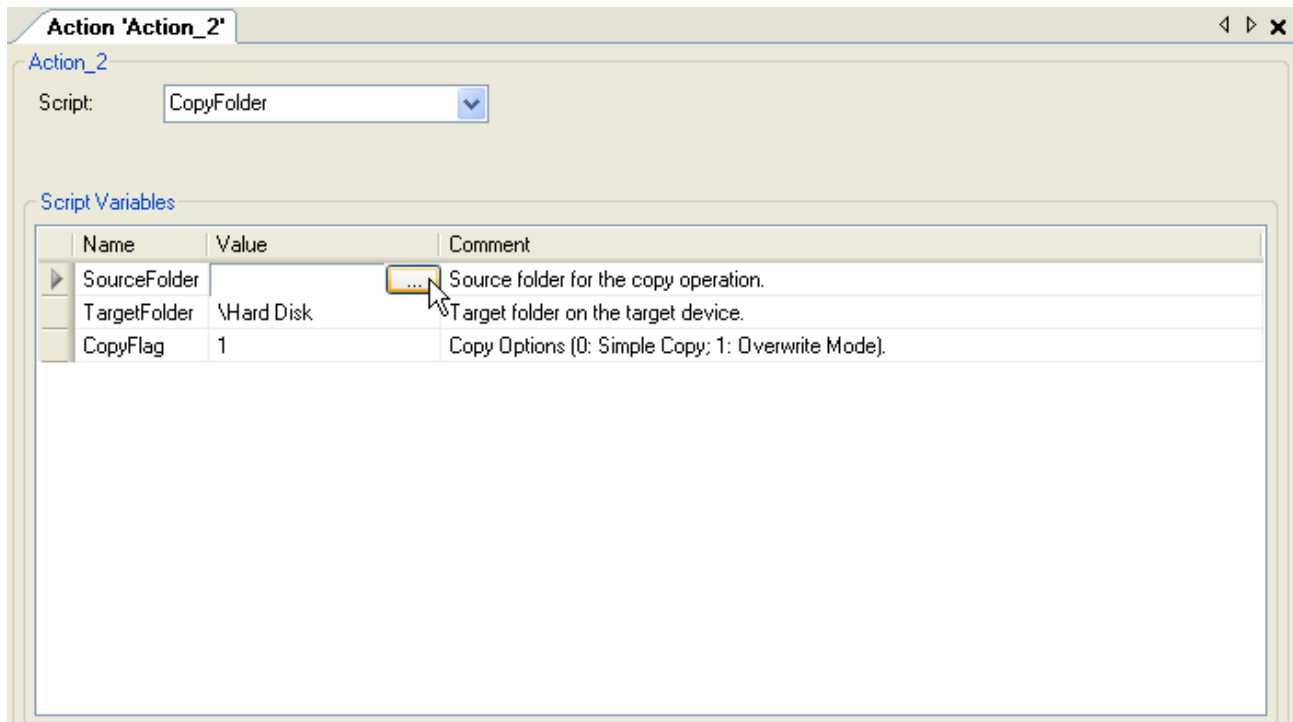

Script variables

SourceFolder:
Please specify the local path for the folder to be copied under "Sourcefolder". Use the button to the right of the text field.

TargetFolder:
The Targetfolder contains the path on the device into which the selected file is to be copied.

BECKHOFF

CopyFlag:
The CopyFlag contains the copy options, which you can select as required. The following table shows all available options.

0	Simple copying of a folder
1	Copying fails if the folder already exists.

4.3 "CX10xxImageUpdate.script"

Use the "CX10xxImageUpdate.script" to update the CX device.
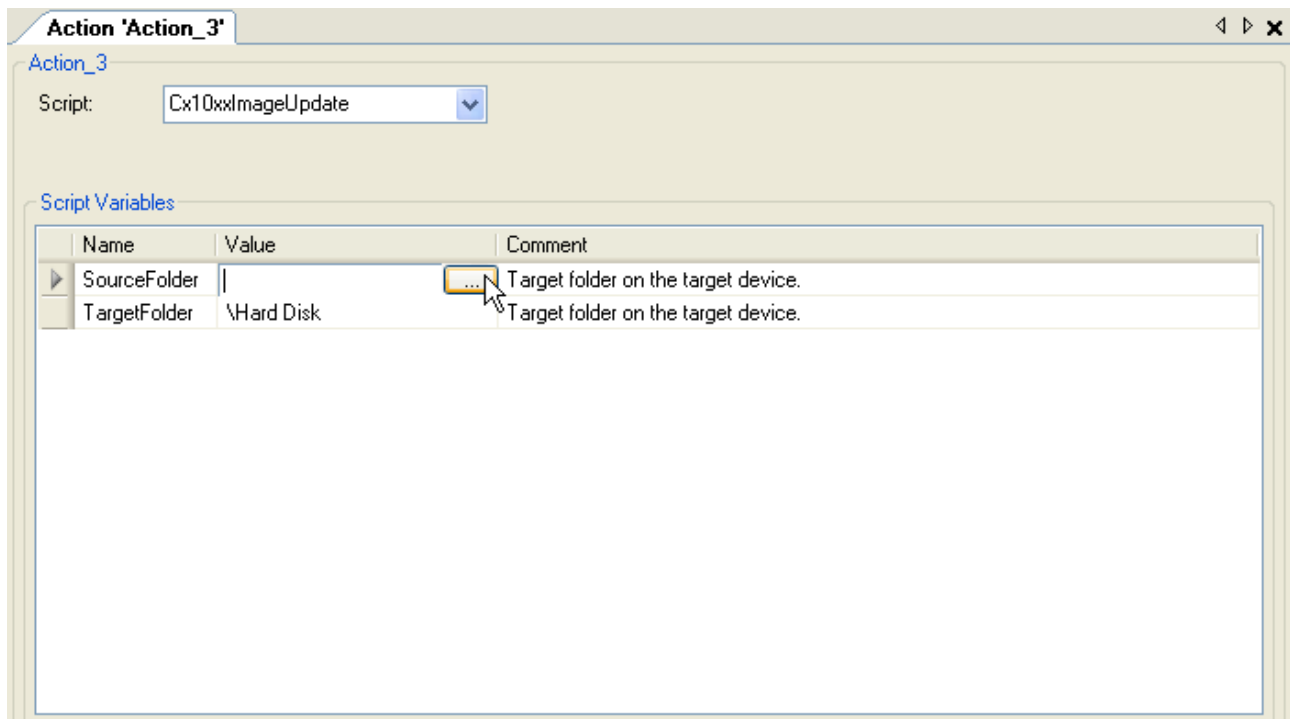

Script variables:

SourceFolder:
Please specify the local path for the folder to be copied under "SourceFolder". Use the button to the right of the text field. The selected folder should contain all image files and in the right folder structure.

TargetFolder:
The "TargetFolder" contains the path on the device to which the folder with the image files is to be copied.

4.4 "CX90xxImageUpdatePrep.script"

The "CX90xxImageUpdatePrep.script" can be used to replace all system files and reset the device settings to their original state.
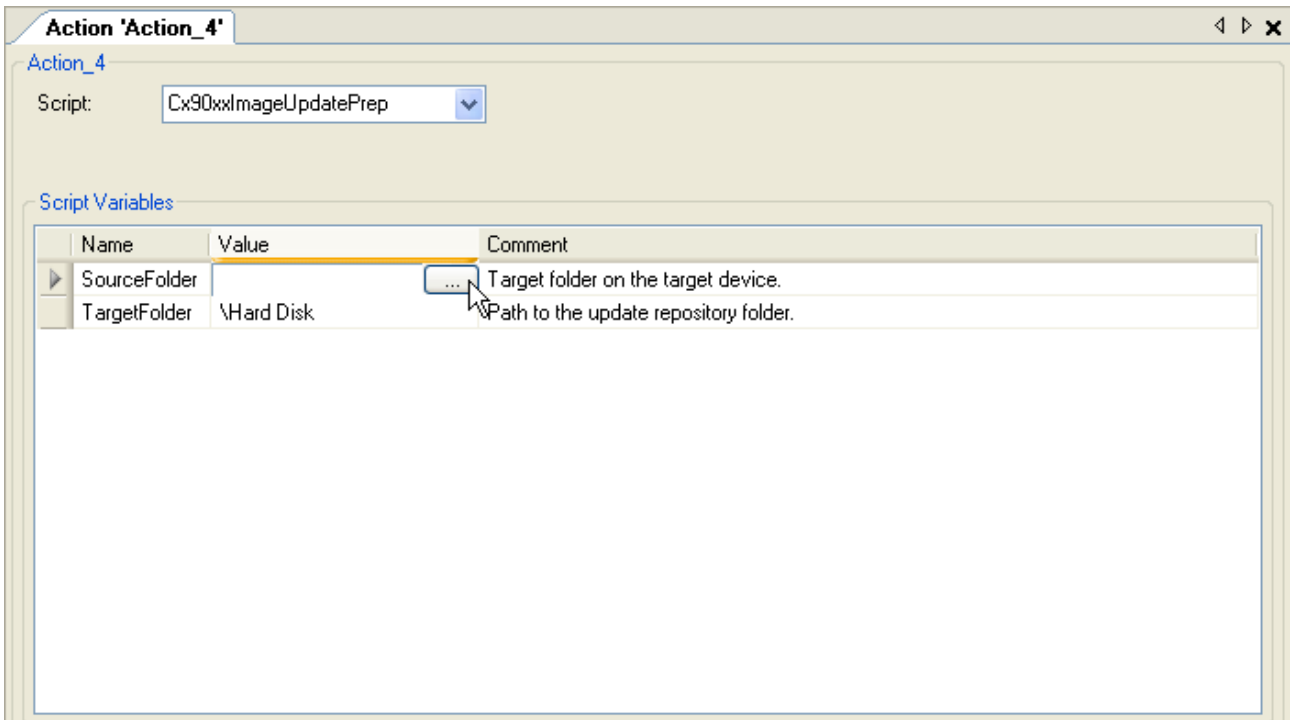

Script variables:

SourceFolder:
Please specify the local path for the folder to be copied under "SourceFolder". Use the button to the right of the text field. The selected folder should contain all system files and in the right folder structure.

TargetFolder:
The "TargetFolder" contains the path on the device to which the folder with the image files is to be copied.

4.5 "CX90xxImageUpdate.script"

The "CX90xxImageUpdate.script" can be used to apply a new Windows CE image.
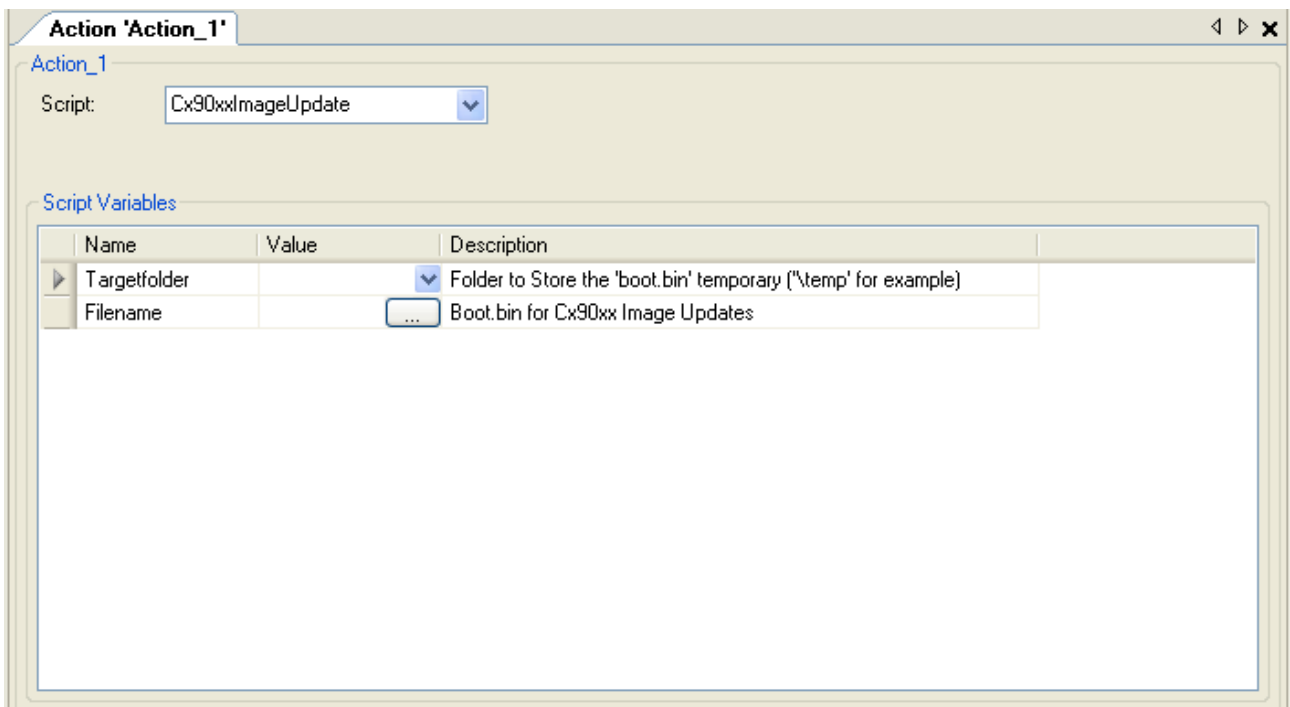

Script variables:

TargetFolder:
Under "**TargetFolder**" please specify the path on the target device under which the image file is to be stored temporarily. It is advisable to use "\Temp" or "\pubic" as target directory, since they are located on the RAM disk memory area, not in the Flash area of the system.

Filename:
Enter the image file to be loaded onto the device. Use the button to search for the file.

4.6 "CXImageBackup.script"

The "CXImageBackup.script" can be used to carry out a backup for the embedded device. The standard folders *RegFiles*, *System*, *TwinCAT*, *UPnP* and *WWW* from the *HardDisk* directory are saved to a directory on the device on which the TwinCAT Management Server runs.
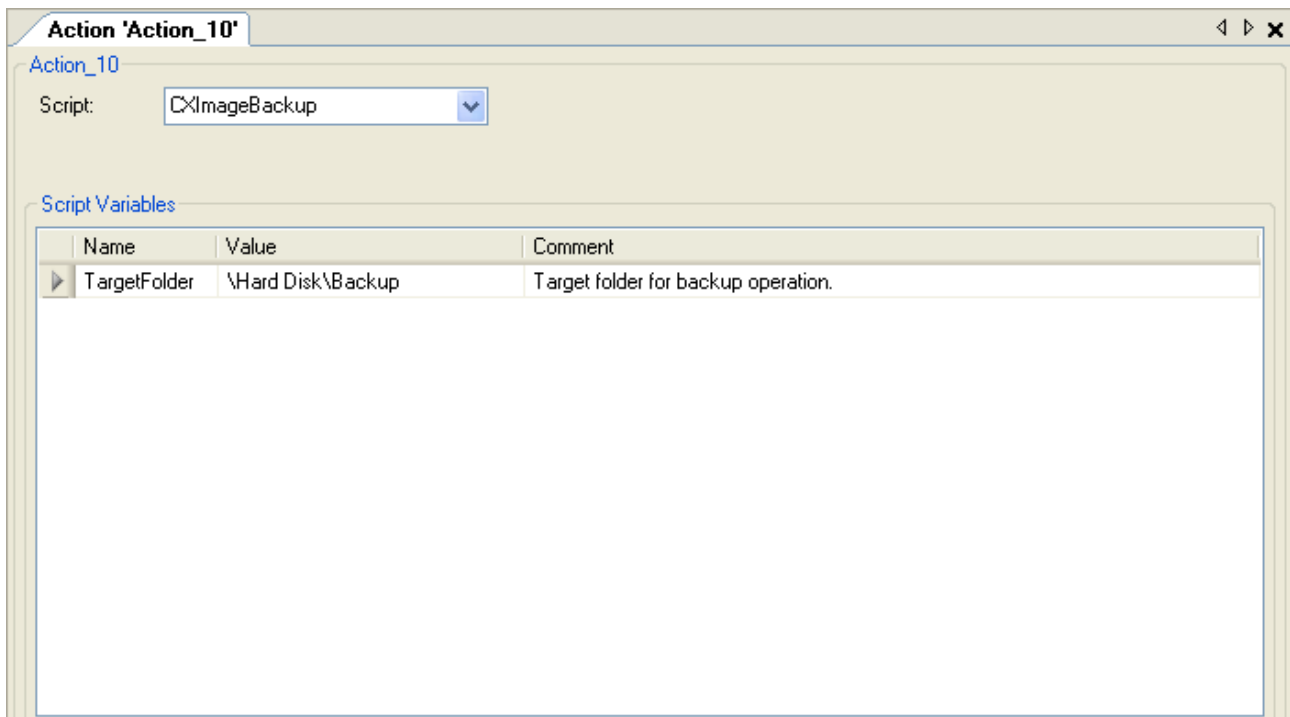

Script variables:

TargetFolder:
The "TargetFolder" contains the path under which the backup is stored on the TwinCAT Management Server computer.

> ⓘ
> - The folder Documents and Settings is not backed up. Settings that are required for the proper functioning of your application should be stored as Reg files in the RegFiles folder.
> - The data backup is only possible on the computer on which the TwinCAT Management Server runs.

4.7 "DeleteFile.script"

The "DeleteFile.script" can be used to delete files from your defined devices from a certain folder.
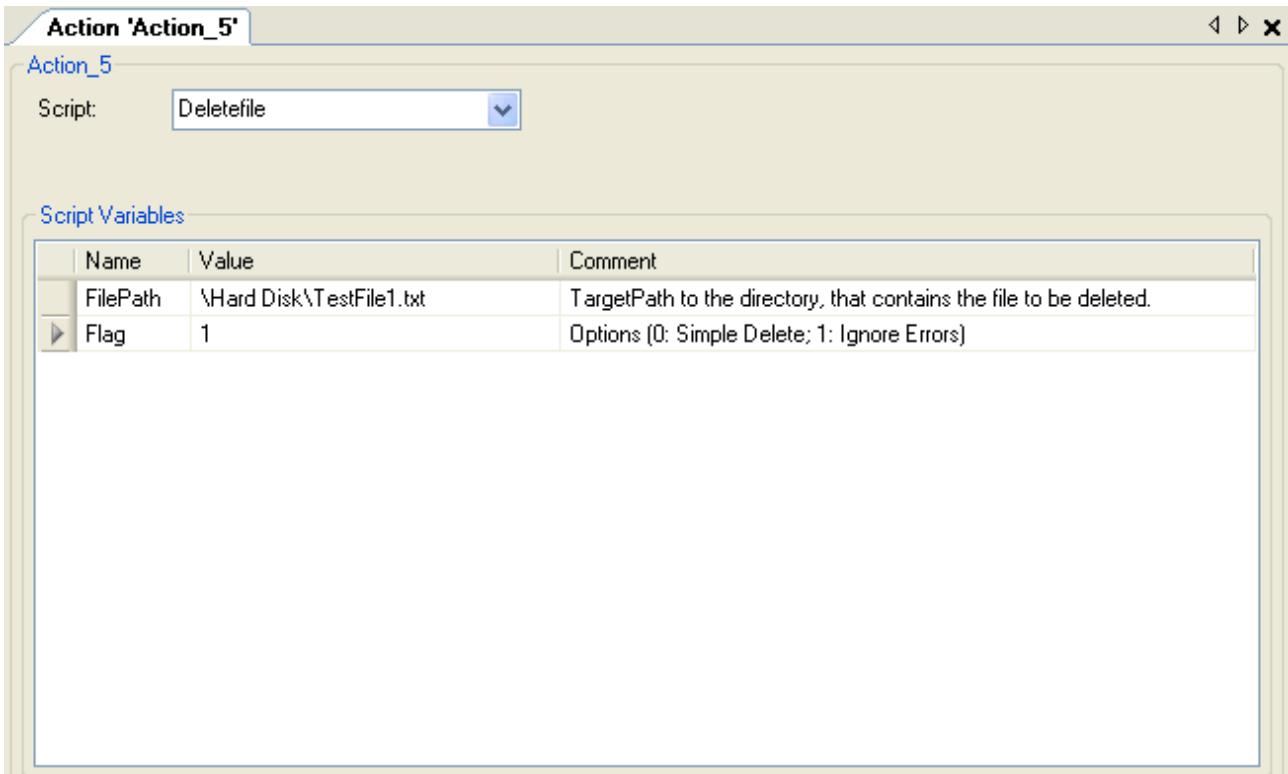

Script variables

Filepath:
The "Filepath" contains the path and the filename of the file to be deleted.

DeleteFlag:
The "DeleteFlag" can be used to specify the delete options.

0	Simple deleting of a file. On error the process is aborted and an error message is issued.
1	Tries to delete the specified file. Any errors, such as read-only files or file does not exist, are ignored. Subsequent actions are executed. **On error the specified file is not deleted.**

4.8   "DeleteFolder.script"

The "DeleteFolder.script" can be used to delete folder from the previously selected devices.
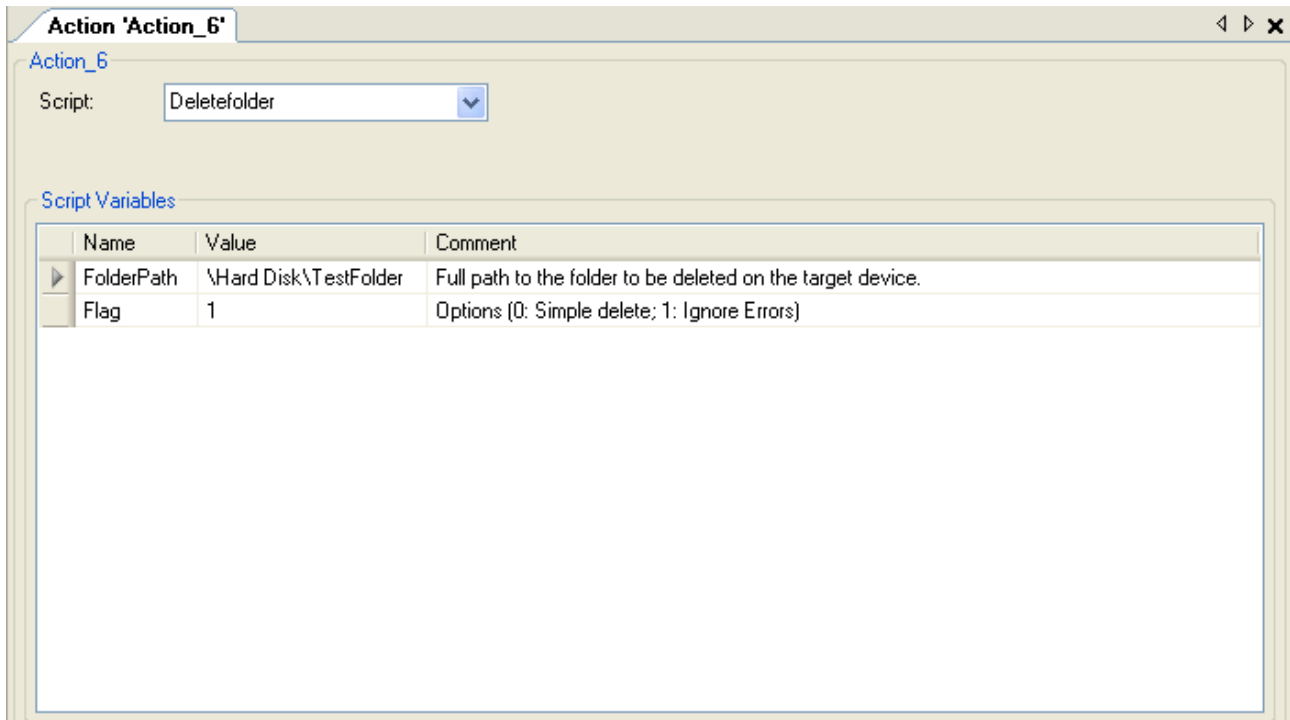

Script variables

Path:
The "Path" contains the path on the device to be deleted.

DeleteFlag:
The "DeleteFlag" can be used to specify the delete options.

0	Simple deleting of a folder. On error the process is aborted and an error message is issued.
1	Tries to delete the specified folder. Any errors, such as read-only files within the folder or folder does not exist, are ignored. Subsequent actions are executed. **On error the specified folder is not deleted.**

4.9 "ExportRegistry.script"

The "ExportRegistry.script" can be used to copy registry keys from the registry of your defined devices into a registry file.
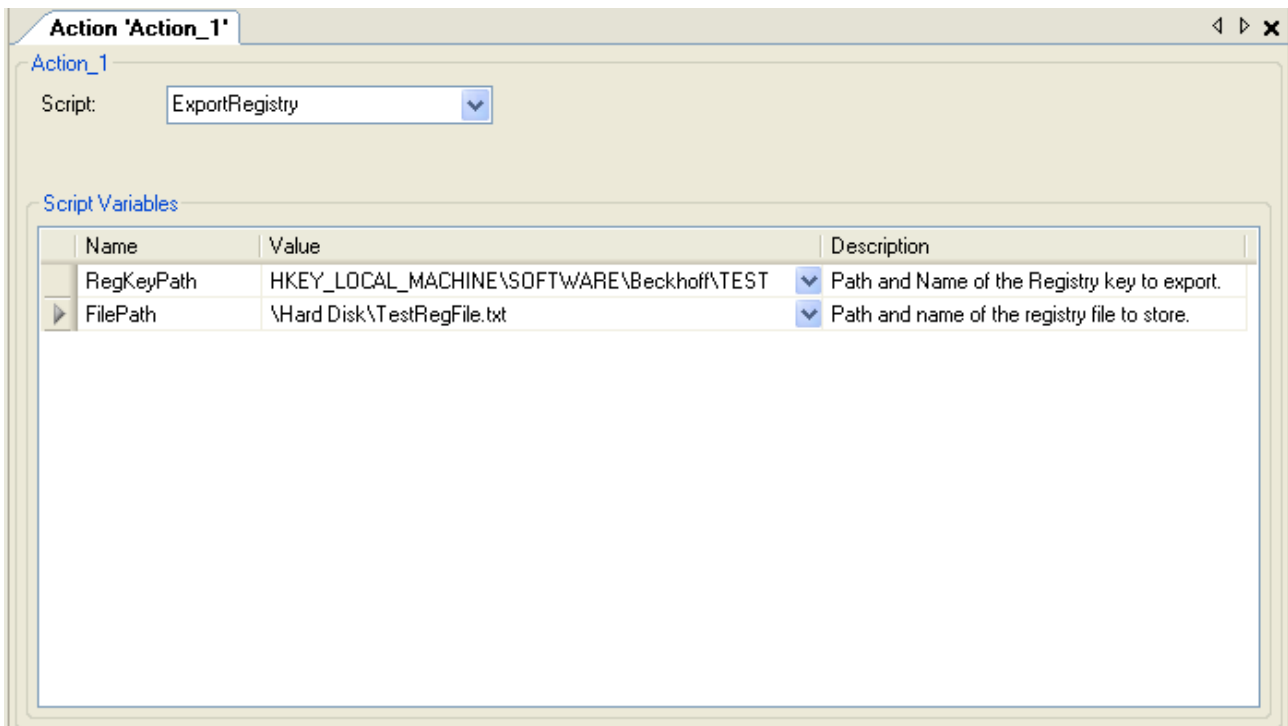

Script variables

RegKeyPath:
The "RegKeyPath" contains the path of registry keys to be copied to the registry file.

Filepath:
The "Filepath" contains the path and the filename of the registry file to which the specified registry key is to be copied.

4.10 "Register.script"

The "Register.script" can be used to copy registry files from your local host PC to the selected devices at a certain position and execute them. Please ensure that the registry files are executable on the CE devices. The registry files should be stored as "Win9x/NT4 Registration File". You can verify this by opening the file in Notepad and comparing the first line of the file. If the first line is "REGEDIT4", the registry file is executable on CE devices.
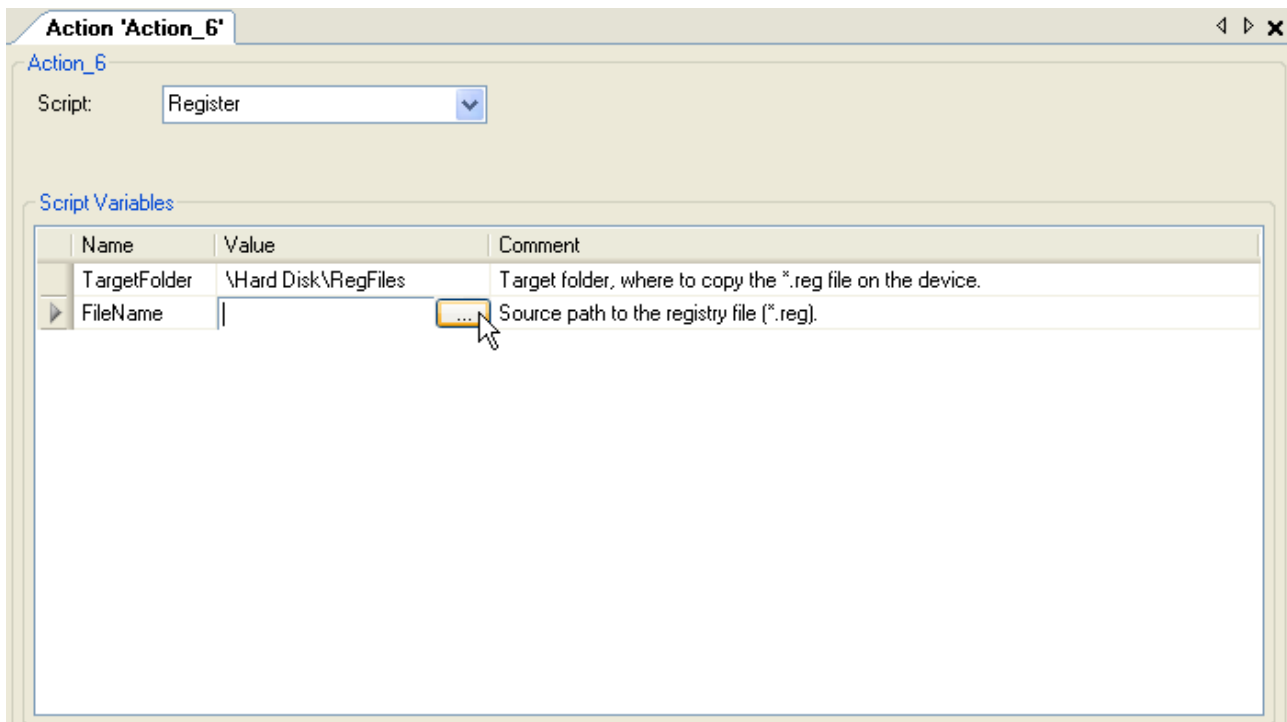

Script variables

Targetfolder:
The "Targetfolder" contains the path on the device into which the selected file is to be copied.

FileName:
Please specify the local path for the registry file to be copied under "FileName". Use the button to the right of the text field.

4.11 "RenameFile.script"

The "RenameFile.script" can be used to rename files on the selected devices.
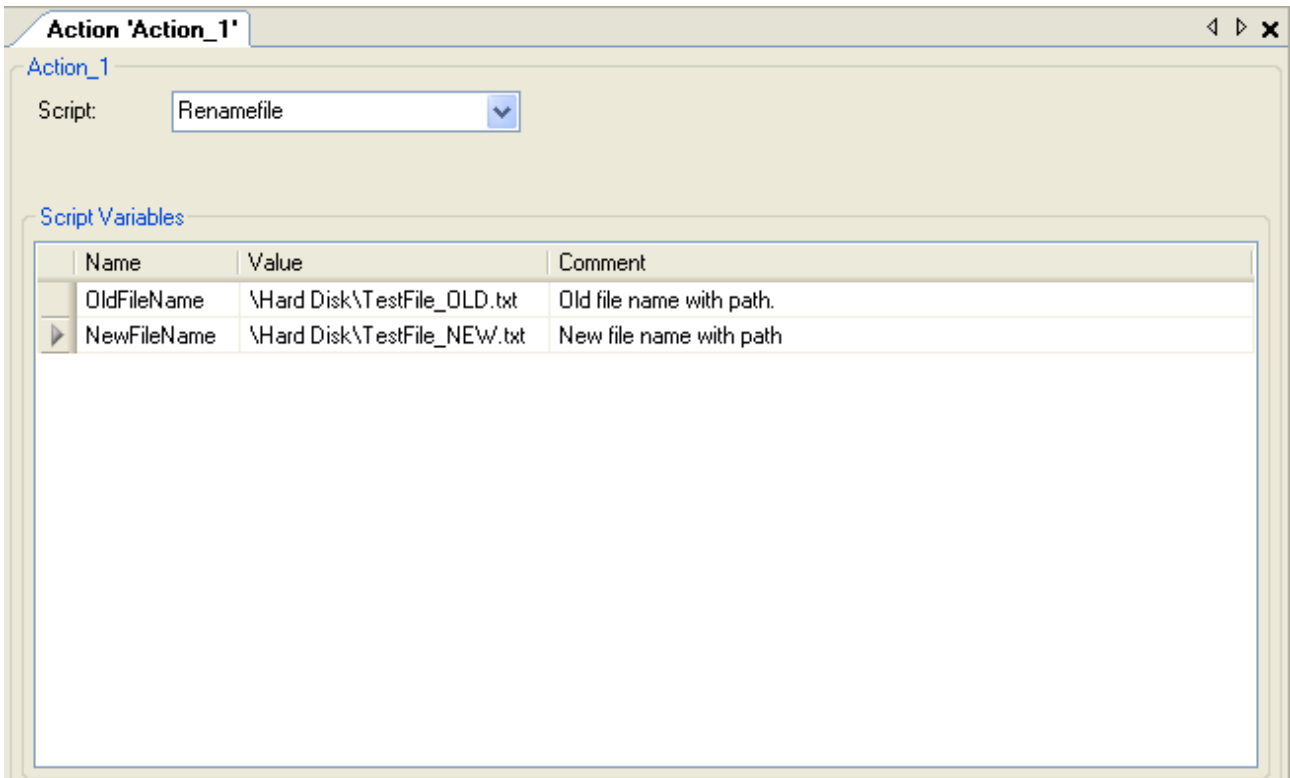

Script variables

OldFileName:
The "OldFileName" contains the old filename, including the path.

NewFileName:
The "NewFileName" contains the new filename, including the path.

4.12 "RenameFolder.script"

The "RenameFolder.script" can be used to rename folders on the selected devices.
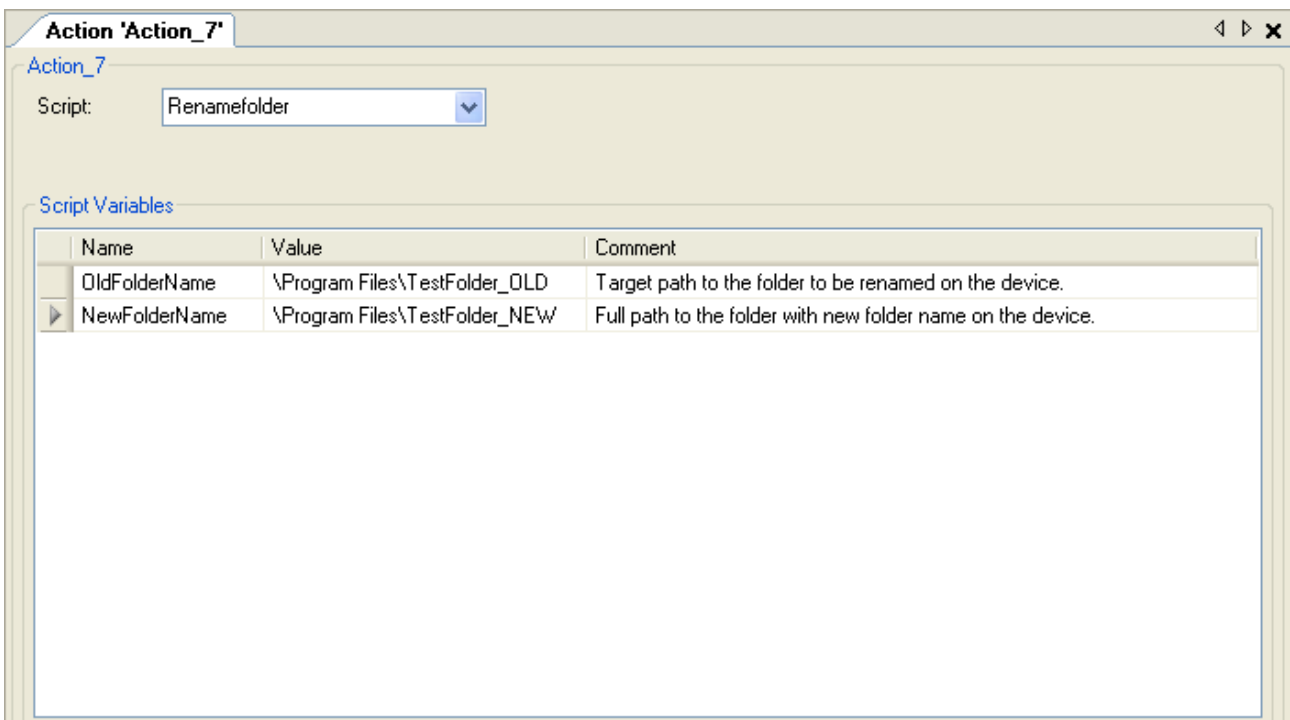

Script variables

OldFolderName:
The "OldFolderName" contains the path with the old folder name.

NewFolderName:
The "NewFolderName" contains the path with the new folder name.

4.13 "Restart.script"

The "Restart.script" can be used to trigger a restart of the selected devices. After the restart further actions are automatically executed, if applicable. For the "Restart.script" no further parameters are required.
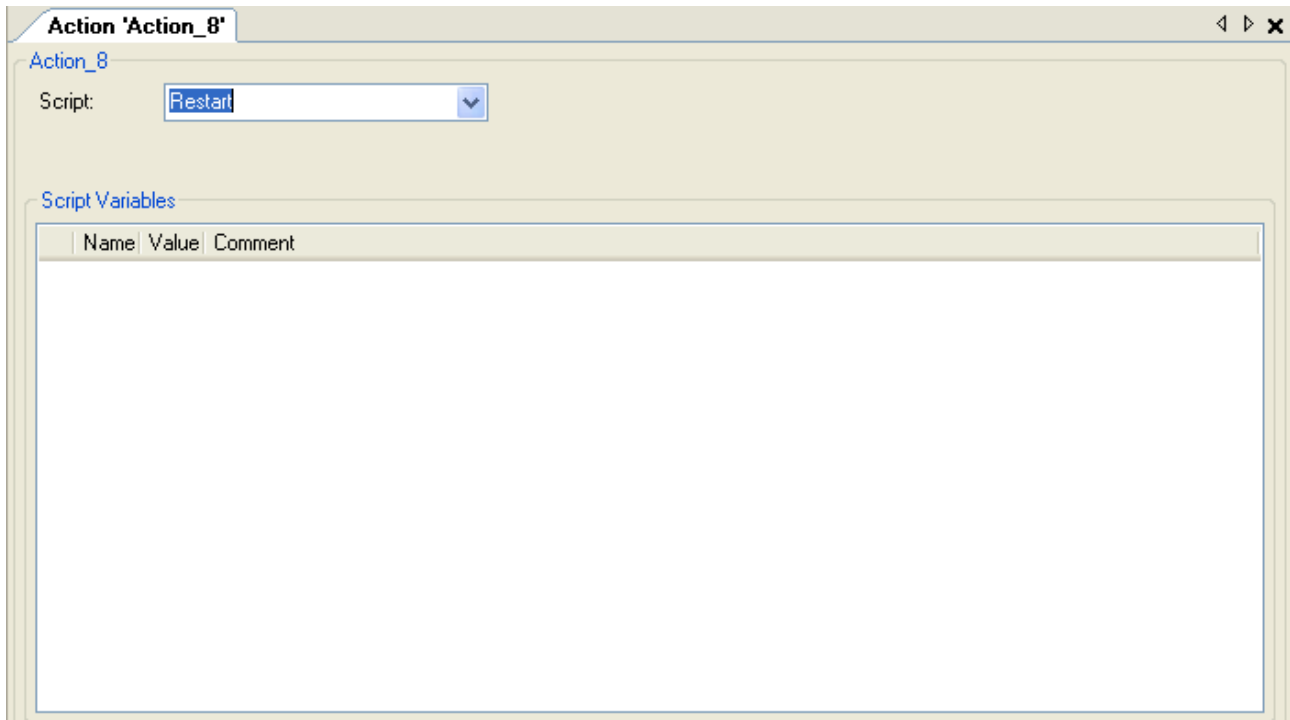

4.14 "Run.script"

The "Run.script" can be used to start programs on the selected devices. These program calls can be accompanied by parameters.
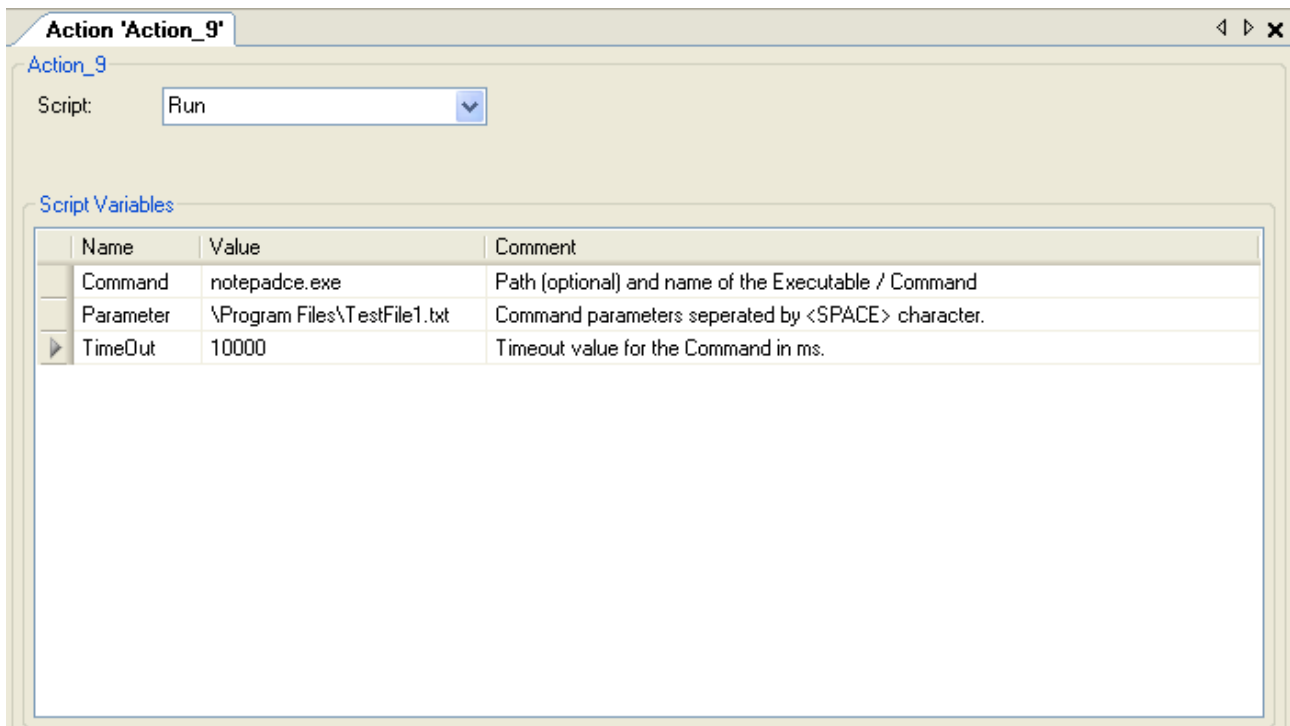

Script variables

Command:
The "Command" contains the name (and the path if required) of the program to be executed

Parameters:
Parameters to accompany the program call can be specified under "Parameter". The parameters should by separated by spaces.

TimeOut:
"TimeOut" can be used to specify a maximum execution duration. The time is specified in milliseconds.

4.15 Script Editor

4.15.1 Script Editor overview

The script editor can be used to create and save complex scripts. The stored scripts can be used and executed in your actions.
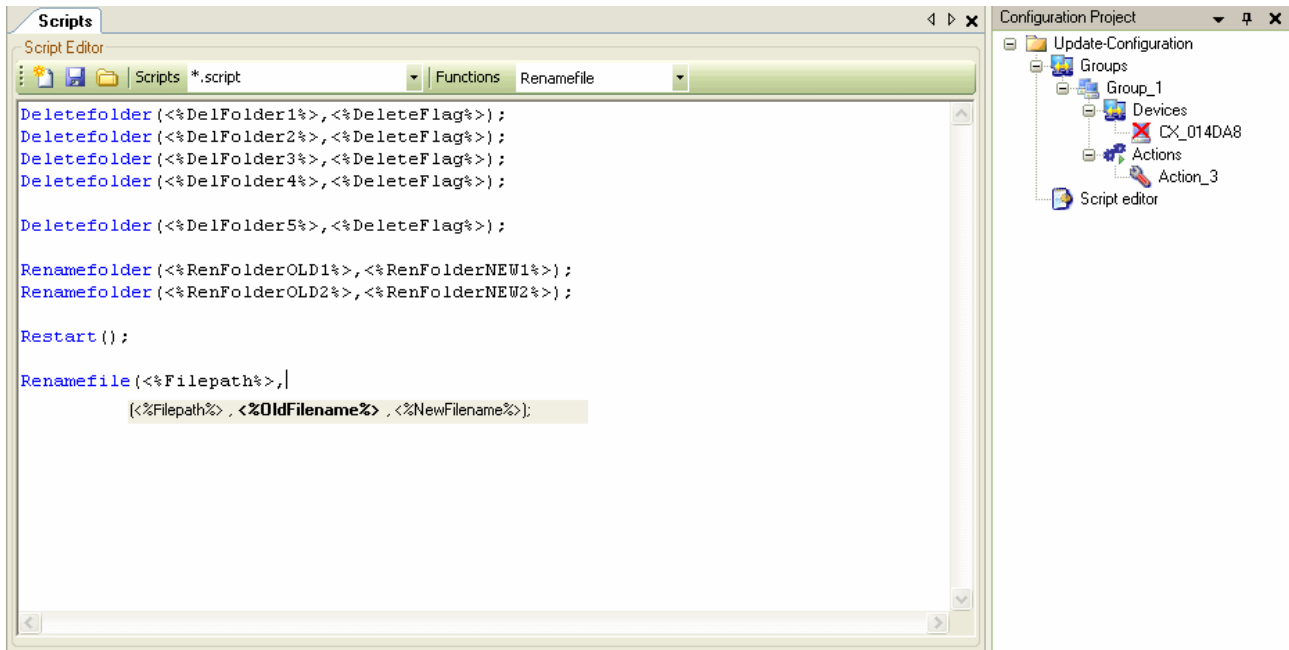

The script editor interface is subdivided into four areas as follows.

1. The script editor toolbar for controlling the script editor (create new script, open/select script, import, export, etc.)
2. The script code editor for viewing / editing the script instructions.
3. A comment field for adding comments relating to the current script.
4. The script parameter editor for editing the script parameters pertaining to the script code.

Script Editor Toolbar
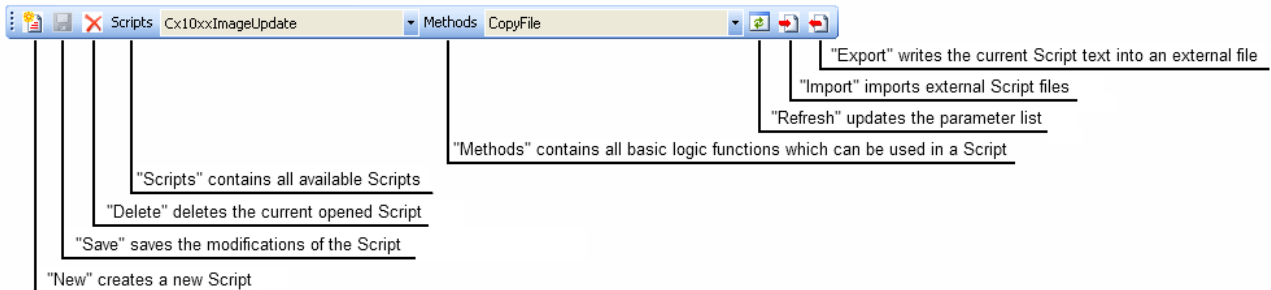

The following standard functions are currently available:

Script	Description
CopyFile [▶ 31]	Copies a file to the remote device.
CopyFolder [▶ 33]	Copies a folder to the remote device
DeleteFile [▶ 35]	Deletes a file on the remote device.
DeleteFolder [▶ 35]	Deletes a folder on the remote device
Register [▶ 36]	Copies a registry file to the remote device and executes it.
ExportRegistry [▶ 36]	Writes a registry key to a registry file on the remote device.
RenameFile [▶ 37]	Renames a file on the remote device.
RenameFolder [▶ 37]	Renames a folder on the remote device.
Restart [▶ 37]	Executes a restart on the remote device
Run [▶ 37]	Starts a certain process on the remote device

Script-Code-Editor

Syntax-highlighting code editor with method tip support.

Comment field

Brief description of the function of the script currently being edited.

Script-Parameter-Editor

Column	Description
Name	Name of the parameter as it appears in the script code (as *<%ParameterName%>* or *<$ParameterName$>*).
Resolution	The column "Resolution" defines who uses the parameter value. This can either happen through the configurator when the update is started ("*ClientVar*") or in the context of the target system ("*ServerVar*"). Valid values: "*ClientVar*" for resolution of the parameter value on the configurator side. "*ServerVar*" for resolution of the parameter value on the CX side
EditorClass	Determines the parameter value editor for parameter value resolution on the configurator side ("*ClientVar*"). E.g. Valid values: *"None"* for no editor *"Folder"* for a directory selection dialog *"File"* for file selection dialog ...
Repository type	Determines the purpose of the current parameter (source or target) for the NetShare folder. Used in combination with the "*Repository Link*" entry. Valid values: "*None*" : "*ShareSource*" : Parameter refers to a value from the configuration context or the source side (e.g. for transferring the filename from the source file to the target) "*ShareTarget*" : Parameter valid in the context of the target system / CX or the target side (e.g. for defining the target directory for a copy operation on the target).
Repository Link	Defines the corresponding complementary "*Repository Type*" parameter, e.g. for the *ShareTarget* for the current *ShareSource* or vice versa. Used in combination with the "*Repository Type*" field.
Comment	Description text for the current parameter.

4.15.2   CopyFile

Table 1: Extracted nested table 5

0	Simple copying of a file.
1	Copying fails if the file already exists.
2	First creates a template for the file, before it is used. This procedure is recommended in a situation with poor connections, in order to prevent copying of incomplete files.
4	Creates a backup of the old file.

Table 2: Extracted nested table 3

0	Simple copying of a file.
1	Copying fails if the file already exists.
2	First creates a template for the file, before it is used. This procedure is recommended in a situation with poor connections, in order to prevent copying of incomplete files.
4	Creates a backup of the old file.

This script function can be used for executing two different copy processes.

- 1. Copy files from the host PC to the target device.
- 2. Copy files locally on the target device from one location to another.

1. Copy from the host PC to the target device:

Copyfile(<$NetShare$>\<%Targetfolder%>\<%Filename%>,<%Targetfolder%>,<%CopyFlag%>);

Parameter	Description
<$NetShare$>	Name of the activation in which the folder structure can be found. Example value: "\\hostPc\TcManagementSrv_TEST"
<%Targetfolder%>	Specifies the name of the directories to which the file is to be copied on the device. Example value: "\Hard Disk\TestFolder"
<%Filename%>	Specifies the name for the file to be copied on the device. Example value: "TestFile1.txt"
<%Targetfolder%>	Specifies the path of the folder structure to be copied. (Usually the same name as the first "Targetfolder" parameter. Therefore the same parameter name) Example value: "\Hard Disk\TestFolder"
<%CopyFlag%>	Options for the copy function. Example values: see "Extracted nested table 3"

Example:

Copyfile("\\hostPC\TcManagementSrv_TEST\Hard Disk\TestFile1.txt","\Hard Disk",1);

2. Copying locally on the target device:

Change the parameter names as described here:

Copyfile(<%LocalShare%>\<%Sourcefolder%>\<%Filename%>,<%Targetfolder%>,<%CopyFlag%>);

Parameter	Description
<%LocalShare%>	Local path under which the folder structure can be found. Example value: "\Hard Disk"
<%Sourcefolder%>	Specifies the path of the folder structure to be copied. Example value: "\TestFolder"
<%Filename%>	Specifies the name for the file to be copied on the device. Example value: "TestFile1.txt"
<%Targetfolder%>	Specifies the name of the directories to which the file is to be copied on the device. Example value: "\Hard Disk\System\TestFolder"
<%CopyFlag%>	Options for the copy function. Example values: see "Extracted nested table 5"

Example:

The following example copies the file "TestFile1.txt" from folder "\Hard Disk\system" to folder "\Hard Disk\TestFolder":

Copyfile("\Hard Disk\System\TestFile1.txt","\Hard Disk\TestFolder",1);

4.15.3 CopyFolder

Table 3: Extracted nested table 4

0	Simple copying of a folder
1	Copying fails if the folder already exists.

Table 4: Extracted nested table 2

0	Simple copying of a folder
1	Copying fails if the folder already exists.

This script function can be used for executing two different copy processes.
- 1. Copy folder from the host PC to the target device.
- 2. Copy folder locally on the target device from one location to another.

1. Copy from the host PC to the target device:

Copyfolder(<$NetShare$>\<%Targetfolder%>,<%Targetfolder%>,<%CopyFlag%>);

Parameter	Description
<$NetShare$>	Name of the activation in which the folder structure can be found. Example value: "\\hostPc\TcManagementSrv_TEST"
<%Targetfolder%>	Specifies the name of the directory to be created on the device Example value: "\Hard Disk\TestFolder"
<%Targetfolder%>	Specifies the path of the folder structure to be copied. (Usually the same name as the first "Targetfolder" parameter. Therefore the same parameter name) Example value: "\Hard Disk\TestFolder"
<%CopyFlag%>	Options for the copy function. Example values: see "Extracted nested table 2"

Example:

Copyfolder("\\hostPC\TcManagementSrv_TEST"\"\Hard Disk","\Hard Disk",1);

2. Copying locally on the target device:

Change the parameter names as described here:

Copyfolder(<%LocalShare%>\<%Sourcefolder%>,<%Targetfolder%>,<%CopyFlag%>);

Parameter	Description
<%LocalShare%>	Name of the activation in which the folder structure can be found. Example value: "\Hard Disk"
<%Sourcefolder%>	Specifies the path of the folder structure to be copied. Example value: "\TestFolder"
<%Targetfolder%>	Specifies the name of the directory to be created on the device. Example value: "\Hard Disk\System\TestFolder"

Parameter	Description
<%CopyFlag%>	Options for the copy function. Example values: see "Extracted nested table 4"

Example:

The following example copies the folder "TestFolder" from "\Hard Disk\System" to "\Hard Disk".

Copyfolder("\Hard Disk\System\TestFolder","\Hard Disk\TestFolder",1);

4.15.4　　DeleteFile

Table 5: Extracted nested table 9

0	Simple file deletion (on error the update sequence is aborted and an error message is issued)
1	Tries to delete the file (Errors are ignored. Update sequence continues. Folder is not necessarily deleted)

The script function "Deletefile" can be used to delete files from the target device.

Deletefile(<%FilePath%>,<%DeleteFlag%>);

Parameter	Description
<%FilePath%>	The path with filename of the file to be deleted. Example value: "\Hard Disk\TestFile.txt"
<%DeleteFlag%>	Options for the delete function. Example values: see "Extracted nested table 9"

Example:

Deletefile("\Hard Disk\TestFile1.txt",0);

4.15.5　　DeleteFolder

Table 6: Extracted nested table 8

0	Simple folder deletion (on error the update sequence is aborted and an error message is issued)
1	Tries to delete the folder (Errors are ignored. Update sequence continues. Folder is not necessarily deleted)

The script function "DeleteFolder" can be used to delete folders from the target device.

Deletefolder(<%Path%>,<%DeleteFlag%>);

Parameter	Description
<%Path%>	The path of the folder to be deleted. Example value: "\Hard Disk\TestFolder"

Parameter	Description
<%DeleteFlag%>	Options for the delete function. Example values: see "Extracted nested table 8"

Example:

Deletefolder("\Hard Disk\TestFolder",0);

4.15.6 ExportRegistry

The script function "ExportRegistry" can be used to write registry keys into a Reg file.

ExportRegistry(<%RegKeyPath%>,<%FilePath%>);

Parameter	Description
<%RegKeyPath%>	The path of the registry key to be written into a registry file. Example values: "HKEY_LOCAL_MACHINE\SOFTWARE\Beckhoff\TEST;
<%FilePath%>	The path with filename into which the registry key is to be written. Example value: "\Hard Disk\TestRegFile.reg"

Example:

ExportRegistry("HKEY_LOCAL_MACHINE\SOFTWARE\Beckhoff\TEST","\Hard Disk\TestRegFile1.reg");

4.15.7 Register

This script function can be used to register Reg files on the target device. The Reg file must already exist on the device.

Register(<%Filepath%>,<%Filename%>);

Parameter	Description
<%Filepath%>	Storage location for Reg file to be executed. Example value: "\Hard Disk\RegFiles"
<%Filename%>	The name of the Reg file to be registered. Example value: "TestRegFile.reg"

Example:

Register("\Hard Disk\RegFiles","TestRegFile.reg");

4.15.8   RenameFile

This script function can be used to rename files on the target device.

Renamefile(<%OldFileName%>,<%NewFileName%>);

Parameter	Description
<%OldFilename%>	Old file name with path Example value: "TestFile1.txt"
<%NewFilename%>	New file name with path Example value: "TestFile2.txt"

Example:

Renamefile("\Hard Disk\TestFilenameOld.txt","\Hard Disk\TestFilenameNew.txt");

4.15.9   RenameFolder

The script function "Renamefolder" can be used to rename folders on the target device.

Renamefolder(<%OldFoldername%>,<%NewFoldername%>);

Parameter	Description
<%OldFoldername%>	Old folder name with path Example value: "\Hard Disk\TestFolder1"
<%NewFoldername%>	New folder name Example value: "\Hard Disk\TestFolder2.txt"

Example:

Renamefolder("\Hard Disk\OLDFoldername","\Hard Disk\NEWFoldername");

4.15.10   Restart

The script function "Restart" can be used to trigger a restart on the target device. Further functions that were declared after the "Restart" function are automatic processed after the restart.

Restart();

4.15.11   Run

The script function "Run" can be used to execute applications on the target device.

Run(<%Command%>,<%Parameter%>,<%Timeout%>);

Parameter	Description
<%Command%>	Application to be executed. Example value: "notepadce.exe"
<%Parameter%>	Start parameters for the application. Example value: "\Hard Disk\TestFile1.txt"
<%Timeout%>	Maximum execution duration in milliseconds. The value -1 sets the execution duration to unlimited Example value: "10000"

Example:

Run("notepadce.exe","\Hard Disk\TestFile.txt",10000);

5   Examples

5.1   Example 1: Image update for a CX1020 via the TwinCAT Management Server

This example illustrates how to apply an image update for a CX1020 via the TwinCAT Management Server. Please read the Installation notes [▶ 8] thoroughly. Correct installation on the server and client is a prerequisite for this example.

Step 1: Project creation

First create a new project in the configurator. Enter a project name and a storage location for creating a .mscp (*Management Server Config Project*) file containing the individual project information.

Step 2: Update configuration

To enable data exchange between the central server and the various devices create the *NetShare* folder and enter it in the *Configuration Project* under *Groups*. Confirm with *Apply*.

Step 3: Adding devices

TwinCAT routes must be available for the devices with which you want to work. You can do this conventional via the TwinCAT System Manager or directly in the configurator by right-clicking on the selected device in the *Network Environment*. In the context menu that opens you can use the *Add Route* option and enter a route in the same way as in the System Manager. You can now copy the devices via drag and drop from the *Network Environment* into the window of the *Devices* subitem. Alternatively, you can use the *Add* button in the *Devices* window. If the Cab file has been installed correctly on the target device, an "X" will appear in column *Connected* after a few seconds. Once this "X" appears the target device is able to process the scripts created in the configurator.

Further device information can be obtained by selecting a device in the *Configuration Project*.

Step 4: Adding actions

Under the *Actions* subitem of a group you can create script-based actions to be started on the devices.

For this example, two actions will be created. The first action updates the complete image of the previously selected CX1020 from HPS 3.21d to HPS 3.21h. The second action is a simple file copying process.
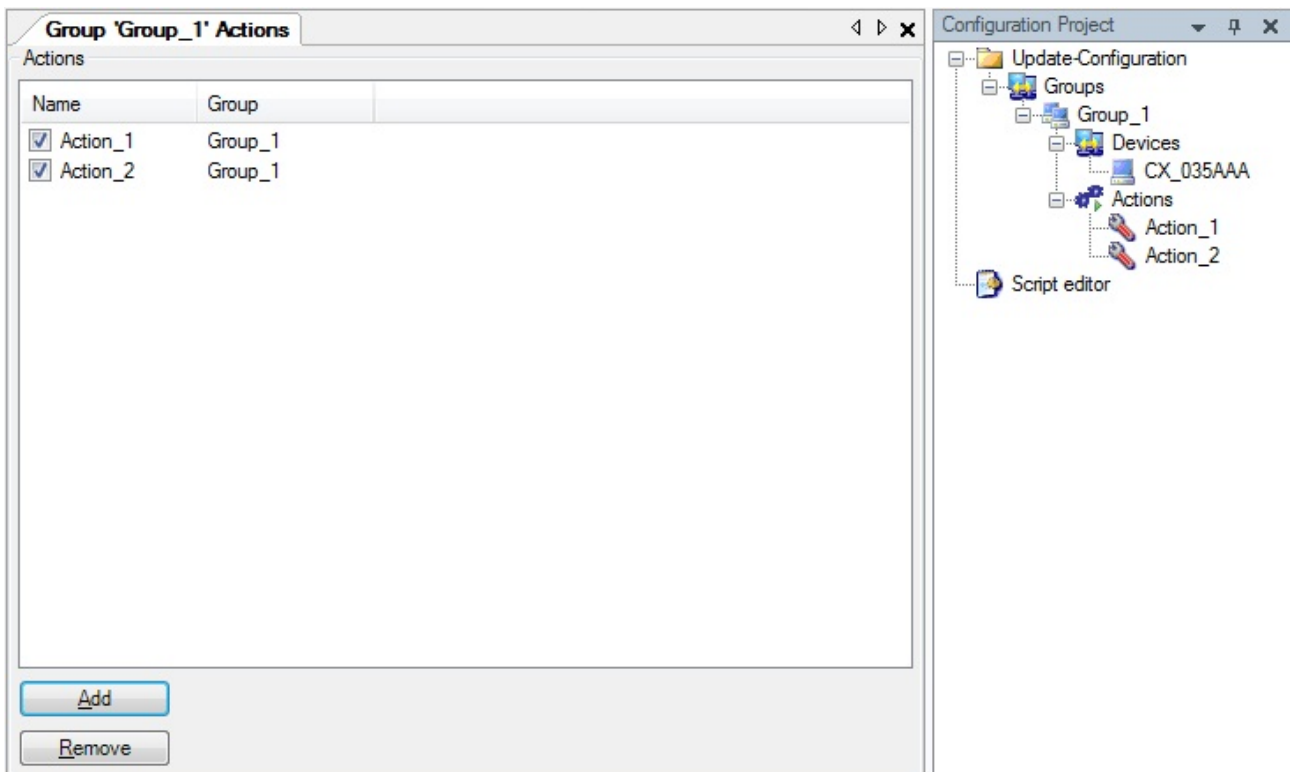

Actions can be added by right-clicking on the subitem *New* in the context menu of the *Configuration Project* or via *Add* in the *Actions* window.
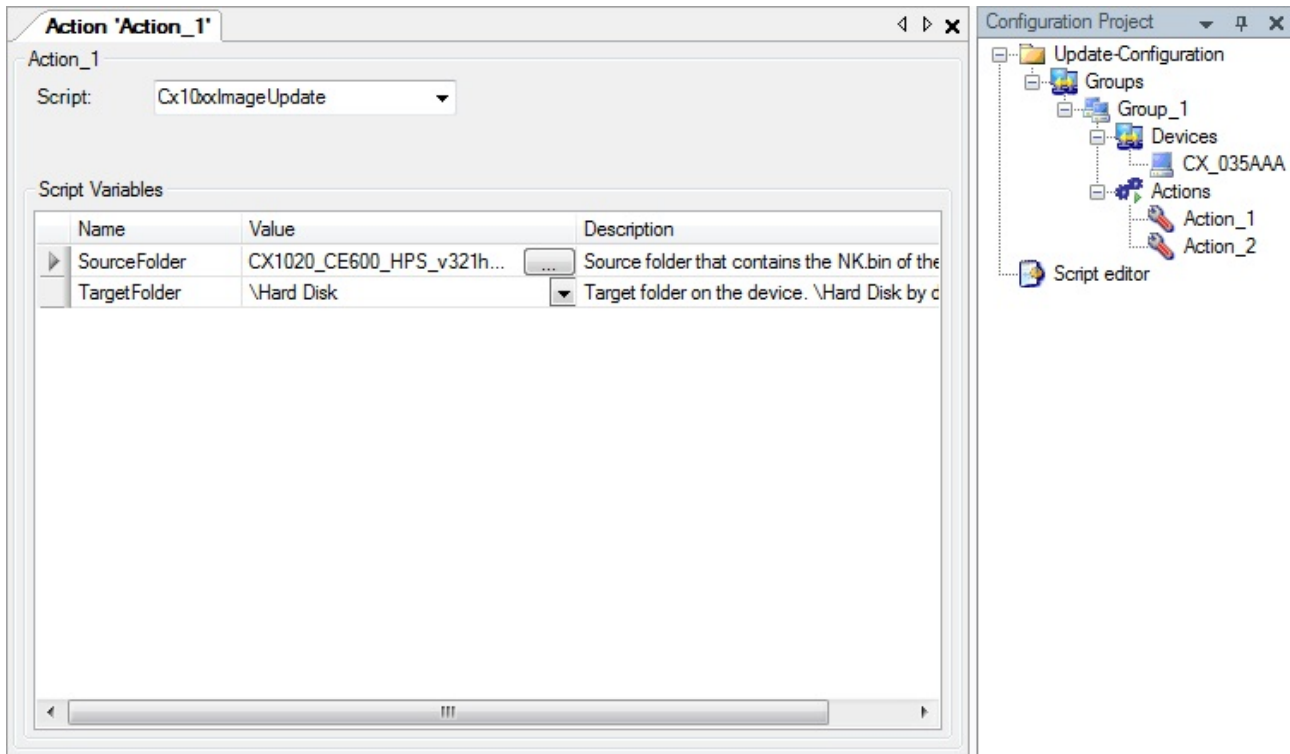

For the first action you have to select the script *Cx10xxImageUpdate*. Enter the folder for the new image in the *SourceFolder* field via the browser button. Select "\Hard Disk" as the *TargetFolder* for an image update on the device. The preparations for the first action are now complete.
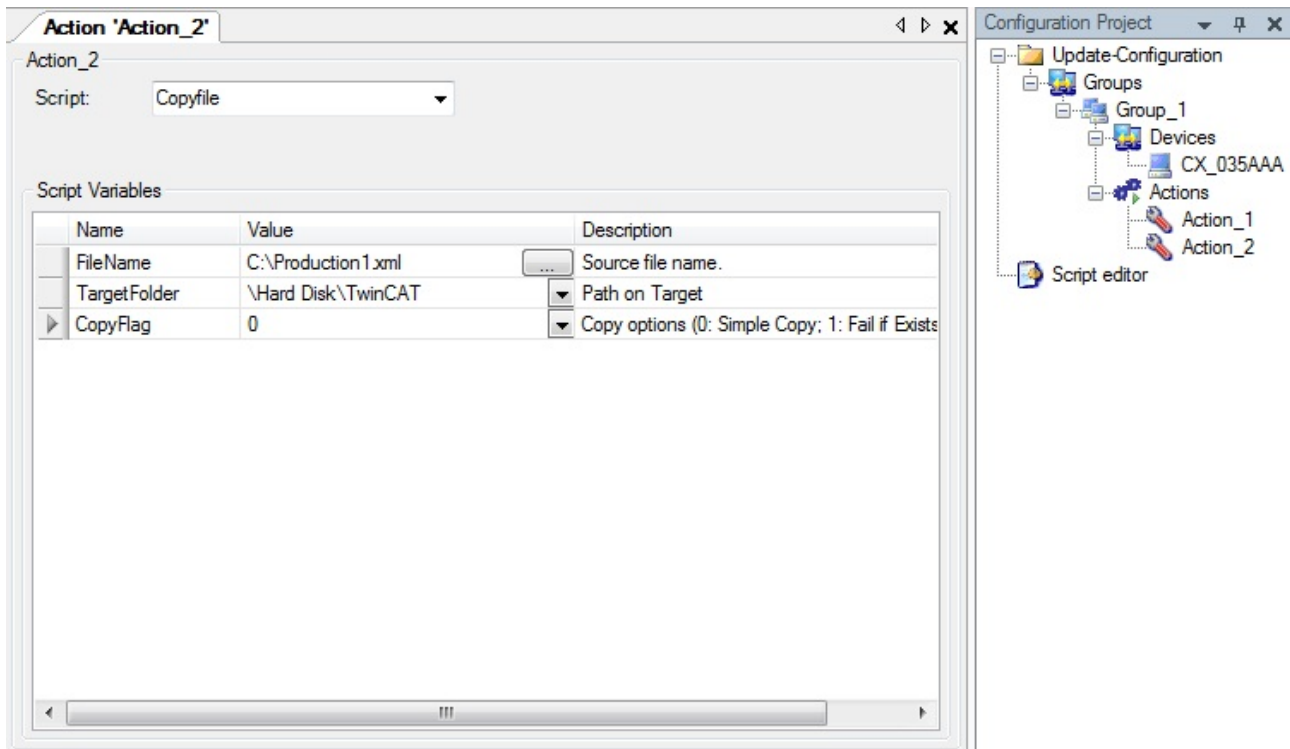

For the second action please select the *Copyfile* script. The aim is to copy an important production file to the device. Under *FileName* you can navigate to the required file. Specify the target directory under TargetFolder and the <u>copy option [▶ 18]</u> under *CopyFlag*. In this case copy option "0" is selected, which means a simple copy process.

Step 5: Start update

The update can now be started from various places in the configurator. One option is the *Play* button in the configurator toolbar. This option would start all activated actions for all available groups. Alternatively you can select the respective device in the *Configuration Project* and start the configured actions for this device in the window that opens.

Under *Device Status* you can monitor the progress of the operations. Once *Finished* appears under *Update State*, highlighted in green, the operations for the respective device have been completed successfully. More detailed information about the device-specific update can be obtained by clicking on the respective device in the *Configuration Project*.

Step 6: Final steps

The script *Cx10xxImageUpdate.script* replaces all system files on the CX and resets all settings and registry entries (except the routes information). The device is restarted to complete the image update. The routes information is stored to ensure that the device is immediately available again. This means the route to your server PC continues to be available and does not have to be refreshed manually.

5.2   Example 2: Image update for a CX9010 via the TwinCAT Management Server

This example illustrates how to apply an image update for a CX9010 via the TwinCAT Management Server. Please read the Installation notes [▶ 8] thoroughly. Correct installation on the server and client is a prerequisite for this example.

Step 1: Project creation

First create a new project in the configurator. Enter a project name and a storage location for creating a .mscp (*Management Server Config Project*) file containing the individual project information.

Step 2: Update configuration

To enable data exchange between the central server and the various devices create the *NetShare* folder and enter it in the *Configuration Project* under *Groups*. Confirm with *Apply*.

Step 3: Adding devices

TwinCAT routes must be available for the devices with which you want to work. You can do this conventional via the TwinCAT System Manager or directly in the configurator by right-clicking on the selected device in the *Network Environment*. In the context menu that opens you can use the *Add Route* option and enter a route in the same way as in the System Manager. You can now copy the devices via drag and drop from the *Network Environment* into the window of the *Devices* subitem. Alternatively you can use the *Add* button in the

Devices window. If the Cab file has been installed correctly on the target device, an "X" will appear in column *Connected* after a few seconds. Once this "X" appears the target device is able to process the scripts created in the configurator.

Further device information can be obtained by selecting a device in the *Configuration Project*.

Step 4: Adding actions

Under the *Actions* subitem of a group you can create script-based actions to be started on the devices.

For this example three actions will be created. The first action updates the files on the image of the previously selected CX9010 from HMI 2.26 to HPS 3.12. The second action is the real image update that is rewriting the boot.bin on the device. The last action is to copy a required additional file.
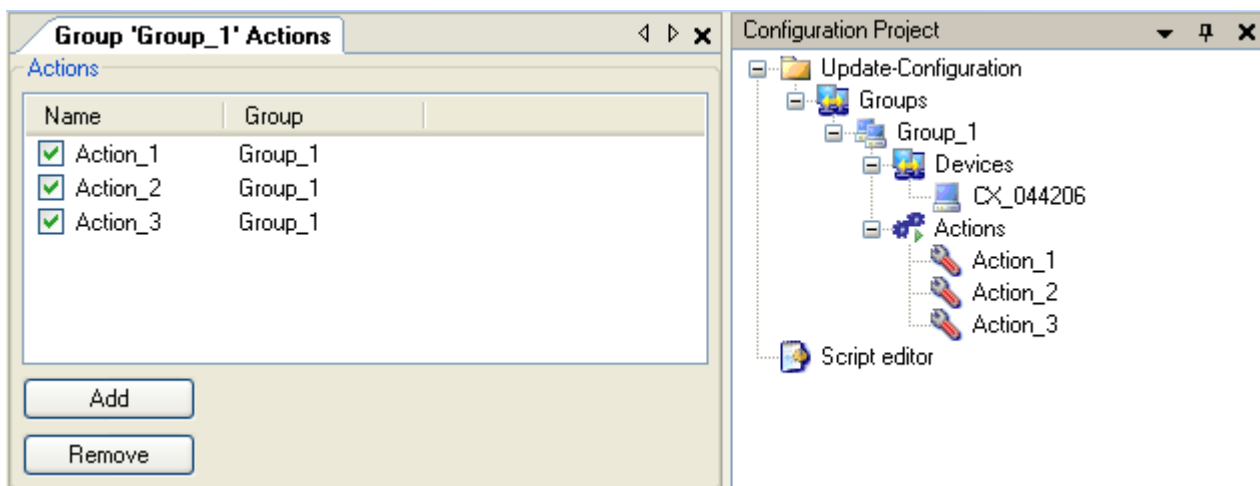

Actions can be added by right-clicking on the subitem *New* in the context menu of the *Configuration Project* or via *Add* in the *Actions* window.
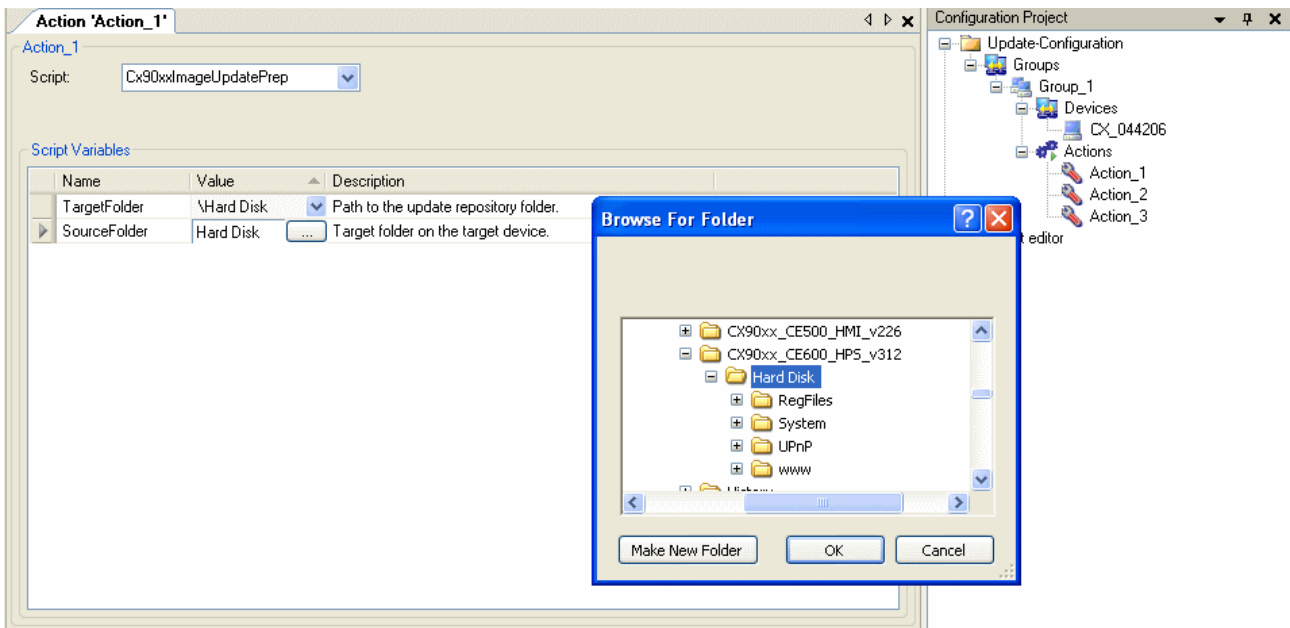

For the first action you have to select the script *Cx90xxImageUpdatePrep*. Enter the folder for the new image in the *SourceFolder* field via the browser button. This is basically the folder containing the "www", "System" and "UPnP" Directory. Select "\Hard Disk" as the *TargetFolder* for an image update on the device. The preparations for the first action are now complete.
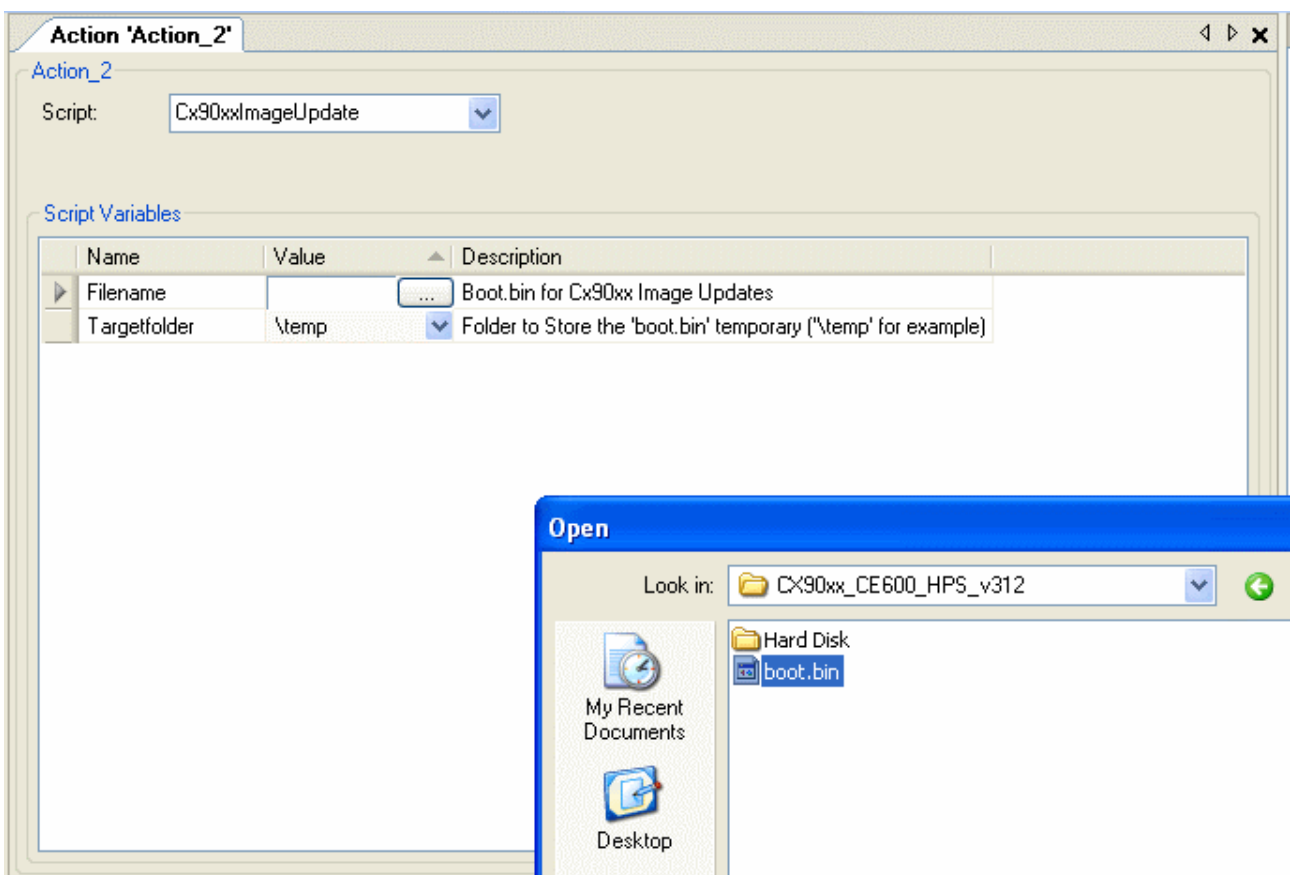

For the second Action the *Cx90xxImageUpdate* script should be selected. Enter the boot.bin of the new image in the *Filename* field. The targetfolder field should contain "\temp". The preparations for the second action are now complete.
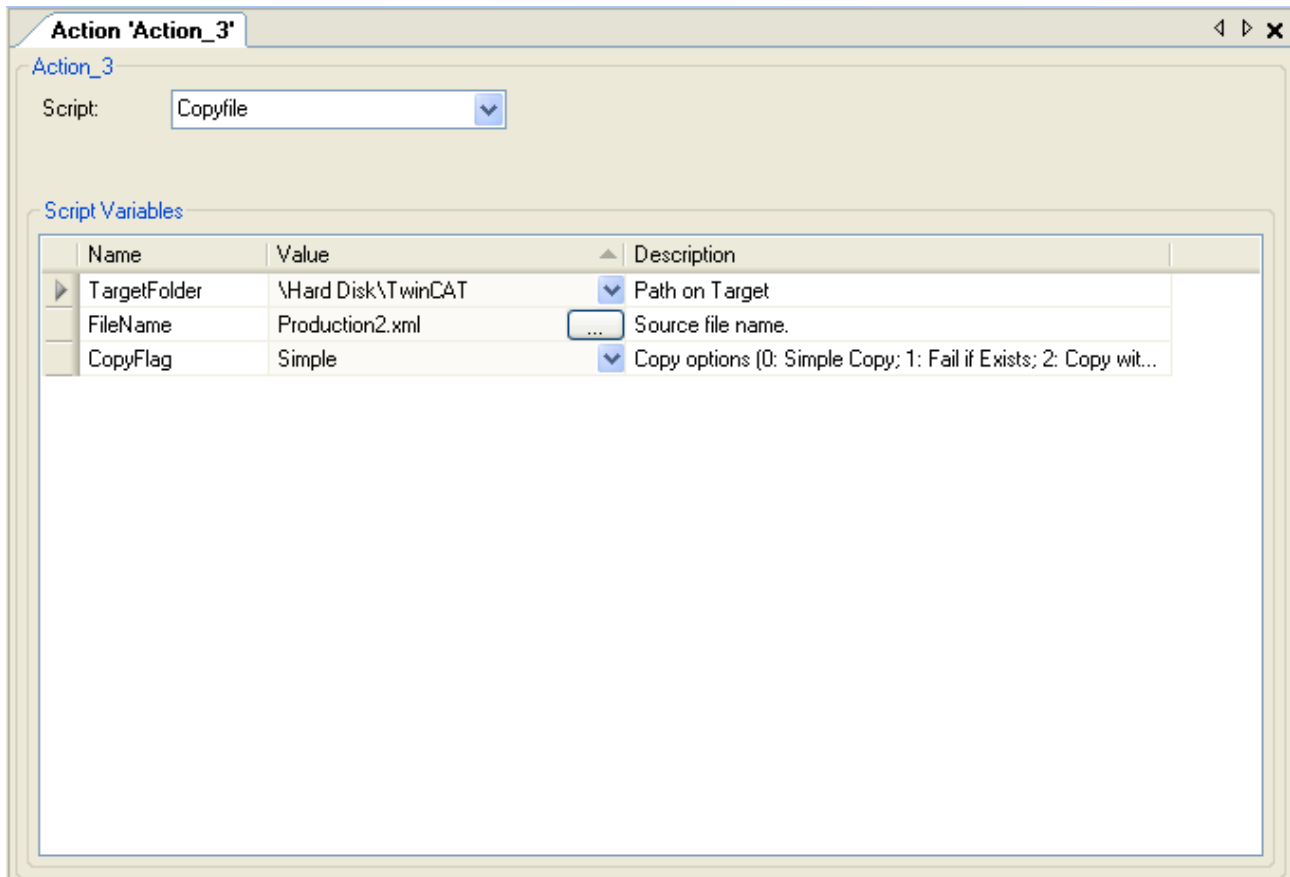

[optional] For the third action please select the *Copyfile* script. The aim is to copy an important production file to the device. Under *FileName* you can navigate to the required file. Specify the target directory under TargetFolder and the copy option [▶ 18] under *CopyFlag*. In this case copy option "Simple" is selected, which means a simple copy process.

Step 5: Start update

The update can now be started from various places in the configurator. One option is the *Play* button in the configurator toolbar. This option would start all activated actions for all available groups. Alternatively, you can select the respective device in the *Configuration Project* and start the configured actions for this device in the window that opens.

Under *Device Status* you can monitor the progress of the operations. Once *Finished* appears under *Update State*, highlighted in green, the operations for the respective device have been completed successfully. More detailed information about the device-specific update can be obtained by clicking on the respective device in the *Configuration Project*.

Step 6: Final steps

The script *Cx90xxImageUpdate.script* replaces all system files on the CX and resets all settings and registry entries (except the routes information). The device is restarted to complete the image update. The routes information is stored to ensure that the device is immediately available again. This means the route to your server PC continues to be available and does not have to be refreshed manually.

6 Appendix

6.1 Win32 Error Codes

The following table provides a list of Win32 error codes.

100 [▶ 50], 200 [▶ 50], 1001 [▶ 50], 1100 [▶ 50], 1200 [▶ 50], 1400 [▶ 50], 1600 [▶ 50], 1800 [▶ 50], 2000 [▶ 50], 3000 [▶ 50], 5000 [▶ 50], 6000 [▶ 50], 8000 [▶ 50], 8500 [▶ 50], 9001 [▶ 50], 10004 [▶ 50], 12000 [▶ 50],

Code (dec)	Code (hex)	Description	Name
0	0x00000000	The operation completed successfully.	ERROR_SUCCESS
1	0x00000001	Incorrect function.	ERROR_INVALID_FUNCTION
2	0x00000002	The system cannot find the file specified.	ERROR_FILE_NOT_FOUND
3	0x00000003	The system cannot find the path specified.	ERROR_PATH_NOT_FOUND
4	0x00000004	The system cannot open the file.	ERROR_TOO_MANY_OPEN_FILES
5	0x00000005	Access is denied.	ERROR_ACCESS_DENIED
6	0x00000006	The handle is invalid.	ERROR_INVALID_HANDLE
7	0x00000007	The storage control blocks were destroyed.	ERROR_ARENA_TRASHED
8	0x00000008	Not enough storage is available to process this command.	ERROR_NOT_ENOUGH_MEMORY
9	0x00000009	The storage control block address is invalid.	ERROR_INVALID_BLOCK
10	0x0000000A	The environment is incorrect.	ERROR_BAD_ENVIRONMENT
11	0x0000000B	An attempt was made to load a program with an incorrect format.	ERROR_BAD_FORMAT
12	0x0000000C	The access code is invalid.	ERROR_INVALID_ACCESS
13	0x0000000D	The data is invalid.	ERROR_INVALID_DATA
14	0x0000000E	Not enough storage is available to complete this operation.	ERROR_OUTOFMEMORY
15	0x0000000F	The system cannot find the drive specified.	ERROR_INVALID_DRIVE
16	0x00000010	The directory cannot be removed.	ERROR_CURRENT_DIRECTORY
17	0x00000011	The system cannot move the file to a different disk drive.	ERROR_NOT_SAME_DEVICE
18	0x00000012	There are no more files.	ERROR_NO_MORE_FILES
19	0x00000013	The media is write protected.	ERROR_WRITE_PROTECT
20	0x00000014	The system cannot find the device specified.	ERROR_BAD_UNIT
21	0x00000015	The device is not ready.	ERROR_NOT_READY
22	0x00000016	The device does not recognize the command.	ERROR_BAD_COMMAND
23	0x00000017	Data error (cyclic redundancy check).	ERROR_CRC
24	0x00000018	The program issued a command but the command length is incorrect.	ERROR_BAD_LENGTH
25	0x00000019	The drive cannot locate a specific area or track on the disk.	ERROR_SEEK

Code (dec)	Code (hex)	Description	Name
26	0x0000001A	The specified disk or diskette cannot be accessed.	ERROR_NOT_DOS_DISK
27	0x0000001B	The drive cannot find the sector requested.	ERROR_SECTOR_NOT_FOUND
28	0x0000001C	The printer is out of paper.	ERROR_OUT_OF_PAPER
29	0x0000001D	The system cannot write to the specified device.	ERROR_WRITE_FAULT
30	0x0000001E	The system cannot read from the specified device.	ERROR_READ_FAULT
31	0x0000001F	A device attached to the system is not functioning.	ERROR_GEN_FAILURE
32	0x00000020	The process cannot access the file because it is being used by another process.	ERROR_SHARING_VIOLATION
33	0x00000021	The process cannot access the file because another process has locked a portion of the file.	ERROR_LOCK_VIOLATION
34	0x00000022	The wrong diskette is in the drive. Insert %2 (Volume Serial Number: %3) into drive %1.	ERROR_WRONG_DISK
36	0x00000024	Too many files opened for sharing.	ERROR_SHARING_BUFFER_EXCEEDED
38	0x00000026	Reached the end of the file.	ERROR_HANDLE_EOF
39	0x00000027	The disk is full.	ERROR_HANDLE_DISK_FULL
50	0x00000032	The request is not supported.	ERROR_NOT_SUPPORTED
51	0x00000033	The remote computer is not available.	ERROR_REM_NOT_LIST
52	0x00000034	A duplicate name exists on the network.	ERROR_DUP_NAME
53	0x00000035	The network path was not found.	ERROR_BAD_NETPATH
54	0x00000036	The network is busy.	ERROR_NETWORK_BUSY
55	0x00000037	The specified network resource or device is no longer available.	ERROR_DEV_NOT_EXIST
56	0x00000038	The network BIOS command limit has been reached.	ERROR_TOO_MANY_CMDS
57	0x00000039	A network adapter hardware error occurred.	ERROR_ADAP_HDW_ERR
58	0x0000003A	The specified server cannot perform the requested operation.	ERROR_BAD_NET_RESP
59	0x0000003B	An unexpected network error occurred.	ERROR_UNEXP_NET_ERR
60	0x0000003C	The remote adapter is not compatible.	ERROR_BAD_REM_ADAP
61	0x0000003D	The printer queue is full.	ERROR_PRINTQ_FULL
62	0x0000003E	Space to store the file waiting to be printed is not available on the server.	ERROR_NO_SPOOL_SPACE
63	0x0000003F	Your file waiting to be printed was deleted.	ERROR_PRINT_CANCELLED
64	0x00000040	The specified network name is no longer available.	ERROR_NETNAME_DELETED
65	0x00000041	Network access is denied.	ERROR_NETWORK_ACCESS_DENIED
66	0x00000042	The network resource type is not correct.	ERROR_BAD_DEV_TYPE
67	0x00000043	The network name cannot be found.	ERROR_BAD_NET_NAME
68	0x00000044	The name limit for the local computer network adapter card was exceeded.	ERROR_TOO_MANY_NAMES

Code (dec)	Code (hex)	Description	Name
69	0x00000045	The network BIOS session limit was exceeded.	ERROR_TOO_MANY_SESS
70	0x00000046	The remote server has been paused or is in the process of being started.	ERROR_SHARING_PAUSED
71	0x00000047	No more connections can be made to this remote computer at this time because there are already as many connections as the computer can accept.	ERROR_REQ_NOT_ACCEP
72	0x00000048	The specified printer or disk device has been paused.	ERROR_REDIR_PAUSED
80	0x00000050	The file exists.	ERROR_FILE_EXISTS
82	0x00000052	The directory or file cannot be created.	ERROR_CANNOT_MAKE
83	0x00000053	Fail on INT 24.	ERROR_FAIL_I24
84	0x00000054	Storage to process this request is not available.	ERROR_OUT_OF_STRUCTURES
85	0x00000055	The local device name is already in use.	ERROR_ALREADY_ASSIGNED
86	0x00000056	The specified network password is not correct.	ERROR_INVALID_PASSWORD
87	0x00000057	The parameter is incorrect.	ERROR_INVALID_PARAMETER
88	0x00000058	A write fault occurred on the network.	ERROR_NET_WRITE_FAULT
89	0x00000059	The system cannot start another process at this time.	ERROR_NO_PROC_SLOTS
100	0x00000064	Cannot create another system semaphore.	ERROR_TOO_MANY_SEMAPHORES
101	0x00000065	The exclusive semaphore is owned by another process.	ERROR_EXCL_SEM_ALREADY_OWNED
102	0x00000066	The semaphore is set and cannot be closed.	ERROR_SEM_IS_SET
103	0x00000067	The semaphore cannot be set again.	ERROR_TOO_MANY_SEM_REQUESTS
104	0x00000068	Cannot request exclusive semaphores at interrupt time.	ERROR_INVALID_AT_INTERRUPT_TIME
105	0x00000069	The previous ownership of this semaphore has ended.	ERROR_SEM_OWNER_DIED
106	0x0000006A	Insert the diskette for drive %1.	ERROR_SEM_USER_LIMIT
107	0x0000006B	The program stopped because an alternate diskette was not inserted.	ERROR_DISK_CHANGE
108	0x0000006C	The disk is in use or locked by another process.	ERROR_DRIVE_LOCKED
109	0x0000006D	The pipe has been ended.	ERROR_BROKEN_PIPE
110	0x0000006E	The system cannot open the device or file specified.	ERROR_OPEN_FAILED
111	0x0000006F	The file name is too long.	ERROR_BUFFER_OVERFLOW
112	0x00000070	There is not enough space on the disk.	ERROR_DISK_FULL
113	0x00000071	No more internal file identifiers available.	ERROR_NO_MORE_SEARCH_HANDLES
114	0x00000072	The target internal file identifier is incorrect.	ERROR_INVALID_TARGET_HANDLE
117	0x00000075	The IOCTL call made by the application program is not correct.	ERROR_INVALID_CATEGORY
118	0x00000076	The verify-on-write switch parameter value is not correct.	ERROR_INVALID_VERIFY_SWITCH

Code (dec)	Code (hex)	Description	Name
119	0x00000077	The system does not support the command requested.	ERROR_BAD_DRIVER_LEVEL
120	0x00000078	This function is not supported on this system.	ERROR_CALL_NOT_IMPLEMENTED
121	0x00000079	The semaphore timeout period has expired.	ERROR_SEM_TIMEOUT
122	0x0000007A	The data area passed to a system call is too small.	ERROR_INSUFFICIENT_BUFFER
123	0x0000007B	The filename, directory name, or volume label syntax is incorrect.	ERROR_INVALID_NAME
124	0x0000007C	The system call level is not correct.	ERROR_INVALID_LEVEL
125	0x0000007D	The disk has no volume label.	ERROR_NO_VOLUME_LABEL
126	0x0000007E	The specified module could not be found.	ERROR_MOD_NOT_FOUND
127	0x0000007F	The specified procedure could not be found.	ERROR_PROC_NOT_FOUND
128	0x00000080	There are no child processes to wait for.	ERROR_WAIT_NO_CHILDREN
129	0x00000081	The %1 application cannot be run in Win32 mode.	ERROR_CHILD_NOT_COMPLETE
130	0x00000082	Attempt to use a file handle to an open disk partition for an operation other than raw disk I/O.	ERROR_DIRECT_ACCESS_HANDLE
131	0x00000083	An attempt was made to move the file pointer before the beginning of the file.	ERROR_NEGATIVE_SEEK
132	0x00000084	The file pointer cannot be set on the specified device or file.	ERROR_SEEK_ON_DEVICE
133	0x00000085	A JOIN or SUBST command cannot be used for a drive that contains previously joined drives.	ERROR_IS_JOIN_TARGET
134	0x00000086	An attempt was made to use a JOIN or SUBST command on a drive that has already been joined.	ERROR_IS_JOINED
135	0x00000087	An attempt was made to use a JOIN or SUBST command on a drive that has already been substituted.	ERROR_IS_SUBSTED
136	0x00000088	The system tried to delete the JOIN of a drive that is not joined.	ERROR_NOT_JOINED
137	0x00000089	The system tried to delete the substitution of a drive that is not substituted.	ERROR_NOT_SUBSTED
138	0x0000008A	The system tried to join a drive to a directory on a joined drive.	ERROR_JOIN_TO_JOIN
139	0x0000008B	The system tried to substitute a drive to a directory on a substituted drive.	ERROR_SUBST_TO_SUBST
140	0x0000008C	The system tried to join a drive to a directory on a substituted drive.	ERROR_JOIN_TO_SUBST
141	0x0000008D	The system tried to SUBST a drive to a directory on a joined drive.	ERROR_SUBST_TO_JOIN
142	0x0000008E	The system cannot perform a JOIN or SUBST at this time.	ERROR_BUSY_DRIVE
143	0x0000008F	The system cannot join or substitute a drive to or for a directory on the same drive.	ERROR_SAME_DRIVE

BECKHOFF

Code (dec)	Code (hex)	Description	Name
144	0x00000090	The directory is not a subdirectory of the root directory.	ERROR_DIR_NOT_ROOT
145	0x00000091	The directory is not empty.	ERROR_DIR_NOT_EMPTY
146	0x00000092	The path specified is being used in a substitute.	ERROR_IS_SUBST_PATH
147	0x00000093	Not enough resources are available to process this command.	ERROR_IS_JOIN_PATH
148	0x00000094	The path specified cannot be used at this time.	ERROR_PATH_BUSY
149	0x00000095	An attempt was made to join or substitute a drive for which a directory on the drive is the target of a previous substitute.	ERROR_IS_SUBST_TARGET
150	0x00000096	System trace information was not specified in your CONFIG.SYS file, or tracing is disallowed.	ERROR_SYSTEM_TRACE
151	0x00000097	The number of specified semaphore events for DosMuxSemWait is not correct.	ERROR_INVALID_EVENT_COUNT
152	0x00000098	DosMuxSemWait did not execute; too many semaphores are already set.	ERROR_TOO_MANY_MUXWAITERS
153	0x00000099	The DosMuxSemWait list is not correct.	ERROR_INVALID_LIST_FORMAT
154	0x0000009A	The volume label you entered exceeds the label character limit of the target file system.	ERROR_LABEL_TOO_LONG
155	0x0000009B	Cannot create another thread.	ERROR_TOO_MANY_TCBS
156	0x0000009C	The recipient process has refused the signal.	ERROR_SIGNAL_REFUSED
157	0x0000009D	The segment is already discarded and cannot be locked.	ERROR_DISCARDED
158	0x0000009E	The segment is already unlocked.	ERROR_NOT_LOCKED
159	0x0000009F	The address for the thread ID is not correct.	ERROR_BAD_THREADID_ADDR
160	0x000000A0	The argument string passed to DosExecPgm is not correct.	ERROR_BAD_ARGUMENTS
161	0x000000A1	The specified path is invalid.	ERROR_BAD_PATHNAME
162	0x000000A2	A signal is already pending.	ERROR_SIGNAL_PENDING
164	0x000000A4	No more threads can be created in the system.	ERROR_MAX_THRDS_REACHED
167	0x000000A7	Unable to lock a region of a file.	ERROR_LOCK_FAILED
170	0x000000AA	The requested resource is in use.	ERROR_BUSY
173	0x000000AD	A lock request was not outstanding for the supplied cancel region.	ERROR_CANCEL_VIOLATION
174	0x000000AE	The file system does not support atomic changes to the lock type.	ERROR_ATOMIC_LOCKS_NOT_SUPPORTED
180	0x000000B4	The system detected a segment number that was not correct.	ERROR_INVALID_SEGMENT_NUMBER

6.2   Questions relating to the Management Server

Please do not hesitate to contact us should you have questions regarding the functionality of the TwinCAT Management Server. Please always specify the version number of your current Management Server. You will find it under *Help > About...*in the menu bar of the Management Server configurator.

Fig. 4: About_Version

In addition, you can help us by providing some general information:

- Which target platforms (x86/ARM) do you use?
- Do your target systems run under Windows XP, Windows XP Embedded or Windows CE?
- Do you use standard scripts or did you define your own scripts?

The following TwinCAT Management Server FAQs address some frequently asked questions.

1. Can I update target devices running Windows XP or XP Embedded through the Management Server?
2. Can I create my own scripts and execute them as an action?
3. Are standard scripts available for a full update of my Embedded PC or Industrial PC running Windows CE?

Can I update target devices running Windows XP or XP Embedded through the Management Server?

Currently this is not possible. This functionality is currently in development.

Can I create my own scripts and execute them as an action?

Yes, you can create and execute your own complex scripts. Further information is available here [▶ 29].

Are standard scripts available for a full update of my Embedded PC or Industrial PC running Windows CE?

For devices with x86 platform a standard script is available that carries out a full update. This script is documented in detail here [▶ 20]. For devices which an ARM platform a complete update script is currently not available. However, the so-called CX90xxImageUpdatePrep.script [▶ 20] can be used to prepare an update and to reset the device settings to their original state.
