0 Document History

Version	Changes
0.1	first pre-release
0.2	added SMB devices and PCI devices to resources section, updated block diagram, several minor changes
1.0	updated block diagram and feature list, minor changes
1.1	updated contact details, minor changes
1.2	added connector map, updated COM4 description, minor changes
1.3	improved output quality of dimensional drawings, minor changes
1.4	corrected LAN pinout

NOTE

All company names, brand names, and product names referred to in this manual are registered or unregistered trademarks of their respective holders and are, as such, protected by national and international law.

1 Introduction

1.1 Notes on the Documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with the applicable national standards. It is essential that the following notes and explanations are followed when installing and commissioning these components.

1.1.1 Liability Conditions

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards. The documentation has been prepared with care. The products described are, however, constantly under development. For that reason the documentation is not in every case checked for consistency with performance data, standards or other characteristics. None of the statements of this manual represents a guarantee (Garantie) in the meaning of § 443 BGB of the German Civil Code or a statement about the contractually expected fitness for a particular purpose in the meaning of § 434 par. 1 sentence 1 BGB. In the event that it contains technical or editorial errors, we retain the right to make alterations at any time and without warning. No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

1.1.2 Copyright

© This documentation is copyrighted. Any reproduction or third party use of this publication, whether in whole or in part, without the written permission of Beckhoff Automation GmbH, is forbidden.

1.2 Safety Instructions

Please consider the following safety instructions and descriptions. Product specific safety instructions are to be found on the following pages or in the areas mounting, wiring, commissioning etc.

1.2.1 Disclaimer

All the components are supplied in particular hardware and software configurations appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH.

1.2.2 Description of Safety Symbols

The following safety symbols are used in this documentation. They are intended to alert the reader to the associated safety instructions.

ACUTE RISK OF INJURY!

If you do not adhere to the safety advise next to this symbol, there is immediate danger to life and health of individuals!

RISK OF INJURY!

If you do not adhere to the safety advise next to this symbol, there is danger to life and health of individuals!

HAZARD TO INDIVIDUALS, ENVIRONMENT, DEVICES, OR DATA!

If you do not adhere to the safety advise next to this symbol, there is obvious hazard to individuals, to environment, to materials, or to data.

NOTE OR POINTER

This symbol indicates information that contributes to better understanding.

1.3 Essential Safety Measures

1.3.1 Operator's Obligation to Exercise Diligence

The operator must ensure that

- the product is only used for its intended purpose
- the product is only operated in sound condition and in working order
- the instruction manual is in good condition and complete, and always available for reference at the location where the products are used
- the product is only used by suitably qualified and authorised personnel
- the personnel is instructed regularly about relevant occupational safety and environmental protection aspects
- the operating personnel is familiar with the operating manual and in particular the safety notes contained herein

1.3.2 National Regulations Depending on the Machine Type

Depending on the type of machine and plant in which the product is used, national regulations governing the controllers of such machines will apply, and must be observed by the operator. These regulations cover, amongst other things, the intervals between inspections of the controller. The operator must initiate such inspections in good time.

1.3.3 Operator Requirements

- Read the operating instructions

All users of the product must have read the operating instructions for the system they work with.

- System know-how

All users must be familiar with all accessible functions of the product.

1.4 Functional Range

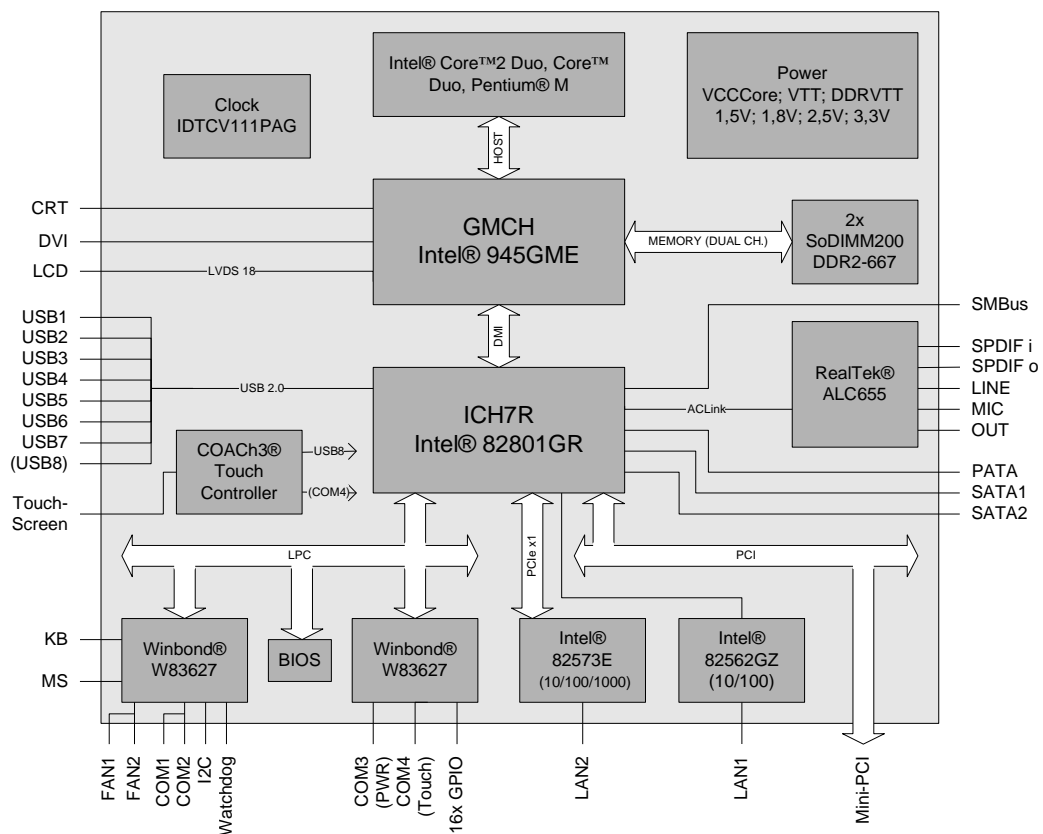

NOTE

The descriptions contained in the present documentation represent a detailed and extensive product description. As far as the described motherboard was acquired as an integral component of an Industrial PC from Beckhoff Automation GmbH, this product description shall be applied only in limited scope. Only the contractually agreed specifications of the corresponding Industrial PC from Beckhoff Automation GmbH shall be relevant. Due to several models of Industrial PCs, variations in the component placement of the motherboards are possible. Support and service benefits for the built-in motherboard will be rendered by Beckhoff Automation GmbH exclusively as specified in the product description (inclusive operation system) of the particular Industrial PC.

2 Overview

2.1 Features

The CB3051 is a highly complex 3,5-inch board with the functionalities of a motherboard. It is equipped with an Intel® Celeron® M, an Intel Core™ Duo, or an Intel® Core™2 Duo processor, with up to 4 GByte DDR2-667-RAM via SoDIMM200, with a Mini-PCI-bus and with additional periphery such as four serial busses, two LAN-connectors, sound input and output, eight USB channels, CRT and TFT connectors, one IDE and two SATA channels. Furthermore, a touch screen can be connected to the board.

- Processor Intel® Celeron® M, Intel® Core™ Duo, Intel® Core™2 Duo
- Chipset Intel 945GM and Intel ICH7
- 2 SoDIMM200 sockets for up to 4 GByte DDR2-667
- Four serial interfaces COM1 up to COM4
- 1x Ethernet 10/100 (Base-T), 1x Ethernet 10/100/1000 (Base-T)
- IDE interface
- Two SATA connectors (up to SATA2, 3GByte/sec)
- PS/2 keyboard / mouse interface
- Eight USB 2.0 interfaces
- AWARD® BIOS 6.10
- CRT connection
- DVI connection
- TFT connection, LVDS 18 bit
- AC97 compatible sound controller with SPDIF in and out
- RTC with external CMOS battery
- 5V single supply voltage

- Mini-PCI interface
- Touch screen interface
- Size 102 mm x 147 mm

2.2 Specifications and Documents

In making this manual and for further reading of technical documentation, the following documents, specifications and web-pages were used and are recommended.

3 Detailed Description

3.1 Power Supply

The power supply of the hardware module is effected via the power connector. The board requires an operating voltage of 5 volt \pm 5%. The two fan connectors can be attached to 12 volt if required.

3.2 CPU

The board can be ordered with one of the following processors employed: Intel® Celeron® M, Intel® Core™ Duo, and Intel® Core™ 2 Duo. The package type allows a maximum die temperature of 100 degrees Celsius and accords highest possible security even in rough environment.

The processor includes a second level cache of up to 4 MByte, depending on which model is used.

Furthermore the processors offer many features known from the desktop range such as MMX2, serial number, loadable microcode etc.

3.3 Memory

There is one conventional SO-DIMM200 socket available to equip the board with memory. For technical and mechanical reasons it is possible that particular memory modules cannot be employed. Please ask your sales representative for recommended memory modules.

With currently available SO-DIMM200 modules a memory extension up to 4 GByte is possible (DDR2-667).

4 Connectors

This section describes all the connectors found on the CB3051.

CAUTION

For most interfaces, the cables must meet certain requirements. For instance, USB 2.0 requires twisted and shielded cables to reliably maintain full speed data rates. Restrictions on maximum cable length are also in place for many high speed interfaces and for power supply. Please refer to the respective specifications and use suitable cables at all times.

4.1 Connector Map

Please use the connector map below for quick reference. Only connectors on the component side are shown. For more information on each connector refer to the table below.

Ref-No.	Function	Page
P501/4	"SATA Interfaces"	p. 33
P503/J500	"IDE Interface"	p. 34

P1302	"Audio"	p. 32
P1303	"System"	p. 19
P1400	"Serial Interface COM1"	p. 36
P1401/4	"USB 1-4"	p. 28
P1403/8	"Serial Ports COM2 through COM4"	p. 37
P1406/10	"USB 5-8"	p. 29
P1407/9	"Fan Connectors"	p. 42
P1500	"External CMOS Battery"	p. 20
P1600	"Power Supply"	p. 18

4.2 Power Supply

The power supply of the hardware module is realized via a 2x8-pin connector (Molex PS 43045-16xx, mating connector: Molex PS 43025-16xx). The pins for 12 volt have the sole purpose of supplying one or both fans with the necessary current. Thus, when no fan is installed, these pins have no function. COM3 RXD and TXD can also be used for connecting a second power supply unit, e. g. for UPS. As an ordering option SMBus signals SCL/SDA can be provided (replacing COM3 TXD/RXD).

Description	Name	Pin	Name	Description	
COM3 transmit data	TXD	1	9	RXD	COM3 receive data
PSU on	PS-ON	2	10	PWRGD	Powergood
powerbutton PSU	PWRBTN#	3	11	SVCC	standby-supply 5V
12 volt supply	12V	4	12	12V	12 volt supply
ground	GND	5	13	GND	ground
ground	GND	6	14	GND	ground
5 volt supply	VCC	7	15	VCC	5 volt supply
5 volt supply	VCC	8	16	VCC	5 volt supply

4.3 System

Some typical signals for system control are provided through a 2x9 pin connector (JST B18B-PHDSS, mating connector: PHDR-18VS). This connector combines signals for power button, reset, keyboard, speaker, and several LEDs such as harddisk LED, touch screen LED, suspend LED, and three additional LEDs which are driven by GPIOs. Of these three GPIO-LEDs, LED1 and LED2 are already provided with a series resistor. As can be seen from the pinout table below, corresponding signals are often placed vis-à-vis or at least near to each other.

Description	Name	Pin	Name	Description
ground	GND	1	10	PWRBTN# on/suspend button
ground	GND	2	11	RESET# reset to ground
LED touch screen	TOUCHLED	3	12	3.3V 3.3 volt supply
LED suspend / ACPI	S-LED	4	13	S3.3V standby supply 3.3 volt
LED harddisk	HDLED	5	14	3.3V 3.3 volt supply
LED GPIO device	LED1	6	15	3.3V 3.3 volt supply
LED GPIO device	LED2	7	16	LED3 LED GPIO device
speaker to 5 volt	SPEAKER	8	17	KDAT keyboard data
standby supply 5 volt	(S)VCC	9	18	KCLK keyboard clock

4.4 External CMOS Battery

For keeping the internal clock alive even if the rest of the board is switched off, an external battery can be attached via a 2 pin connector (JST B2B-EH-A, mating connector: EHR-2).

Pin	Name	Description
1	BATT	battery 3.3 volt
2	GND	ground

4.5 Memory

Conventional SO-DIMM200 memory modules, as familiar from notebook computers, are used to equip the board with memory. For technical and mechanical reasons it is possible that particular memory modules cannot be employed. Please ask your distributor for recommended memory modules.

With currently available SO-DIMM200 modules a memory extension up to 4 GByte is possible (DDR2-667). All timing parameters for different memory modules are automatically set by BIOS.

4.6 VGA/DVI

The module is equipped with a standard DVI-I-connector, which can be used to connect either a DVI capable display or a standard VGA CRT – using a DVI-DSUB adapter, if necessary.

Pinout DVI-I:

Pin	Name	Description
1	TMDSDAT2#	DVI data 2 -
2	TMDSDAT2	DVI data 2 +
3	GND	ground
4	N/C	reserved
5	N/C	reserved
6	DDC CLK	DDC clock (DVI/VGA)

23	TMDS CLK	DVI clock
24	TMDS CLK#	DVI clock
C1	RED	VGA red
C2	GREEN	VGA green
C3	BLUE	VGA blue
C4	HSYNC	VGA horizontal sync
C5	GND	ground

4.7 LVDS

The board also offers the possibility to use displays with LVDS interface. These can be connected via a 30 pin flat-cable plug (JAE FI-X30S-HF-NPB, mating connector: FI-X30C(2)-NPB). Only shielded and twisted cables may be used. The display type is to be chosen over the BIOS setup. The connector has two additional shield pins S1 and S2 which are omitted in the pinout table below.

Pinout LVDS connector:

Pin	Name	Description
1	TXO00#	LVDS even data 0 -
2	TXO00	LVDS even data 0 +
3	TXO01#	LVDS even data 1 -

21	TXO1C	LVDS odd clock +
22	TXO13#	LVDS odd data 3 -
23	TXO13	LVDS odd data 3 +
24	GND	ground
25	3.3V	3.3 volt supply
26	DDC_CLK	EDID clock for LCD

Pin	Name	Description
27	DDC_DAT	EDID data for LCD
28	FP_3.3V	switched 3.3 volt for display
29	FP_BL	switched 5 volt for backlight
30	VCC	5 volt supply

4.8 Touch Screen

A key feature of the CB3051 is the possibility to connect a touch screen. Both 4-wire and 5-wire resistive touch screens are supported. For receiving the relevant signals a 5 pin standard IDC socket connector with a spacing of 2.54 mm is provided. If the connected touch screen is 4-wire then pin 1 will not be used. There is an accompanying jumper which, if shorted at boot time, triggers the NVRST-signal in the controller, thereby resetting all parameters of NVRAM to default values.

Conversion to the respective connector of the touch screen must be provided externally. Please consult the manufacturer’s documentation to figure out the relevant technical details.

Note: In the pinout table below H, X, S, Y, and L are the signal names in the case of 5-wire, XL, XR, YT, and YB are the names in the case of 4-wire.

Pin	Name	Description
1	H-DRV	H driver control
2	X/XL-DRV	X/XL driver control
3	S/XR-DRV	S/XR driver control
4	Y/YT-DRV	Y/YT driver control
5	L/YB-DRV	L/YB driver control

4.9 USB 1-4

The USB channels 1 to 4 are available as standard USB connectors. The USB channels support USB 2.0. You may note that the setting of USB keyboard or USB mouse support in the BIOS-setup is only necessary and advisable, if the OS offers no USB-support. BIOS-setup can be changed with a USB keyboard without enabling USB keyboard support. Running Windows with these features enabled may lead to significant performance or functionality limitations. Every USB interface provides up to 500 mA current and is protected by an electronically resettable fuse.

Pinout USB connector for channel X:

Pin	Name	Description
1	VCC	5 volt for USBX
2	USBX#	minus channel USBX
3	USBX	plus channel USBX
4	GND	ground

4.10 USB 5-8

The USB channels 5 to 8 are provided via two 2x5 pin connectors (JST B10B-PHDSSLFSN, mating connector: PHDR-10VS).

The USB channels support USB 2.0. You may note that the setting of USB keyboard or USB mouse support in the BIOS-setup is only necessary and advisable, if the OS offers no USB-support. BIOS-setup can be changed with a USB keyboard without enabling USB keyboard support. Running Windows with these features enabled may lead to significant performance or functionality limitations.

Every USB interface provides up to 500 mA current and is protected by an electronically resettable fuse.

Pinout 2x5 pin connector USB 5/6

Description	Name	Pin	Name	Description
5 volt for USB5	VCC	1	6	VCC
minus channel USB5	USB5#	2	7	USB6#
plus channel USB5	USB5	3	8	USB6
ground	GND	4	9	GND
reserved	N/C	5	10	N/C

Pinout 2x5 pin connector USB 7/8

Description	Name	Pin	Name	Description
5 volt for USB7	VCC	1	6	VCC
minus channel USB7	USB7#	2	7	USB8#
plus channel USB7	USB7	3	8	USB8
ground	GND	4	9	GND
reserved	N/C	5	10	N/C

4.11 LAN1

The module has two LAN interfaces. LAN1 supports 10BaseT and 100BaseT compatible net components with automatic bandwidth selection. It also offers auto-cross and auto-negotiate functionality. The controller chip is the Intel® 82562. PXE and RPL functions are also supported.

Pinout LAN 10/100:

Pin	Name	Description
1	LAN1-0	LAN1 transmit plus
2	LAN1-0#	LAN1 transmit minus
3	LAN1-1	LAN1 receive plus
4	N/C	reserved
5	N/C	reserved
6	LAN1-1#	LAN1 receive minus
7	N/C	reserved
8	N/C	reserved

4.12 LAN2

LAN2 supports 10BaseT, 100BaseT and 1000BaseT compatible net components with automatic bandwidth selection. It does not offer auto-cross and auto-negotiate functionality. The controller chip is the Intel® 82573L(E). PXE and RPL functions are not supported.

Pinout LAN 10/100/1000:

Pin	Name	Description
1	LAN2-0	LAN2 channel 0 plus
2	LAN2-0#	LAN2 channel 0 minus
3	LAN2-1	LAN2 channel 1 plus
4	LAN2-2	LAN2 channel 2 plus
5	LAN2-2#	LAN2 channel 2 minus
6	LAN2-1#	LAN2 channel 1 minus
7	LAN2-3	LAN2 channel 3 plus
8	LAN2-3#	LAN2 channel 3 minus

4.13 Audio

Audio input and output functions can be accessed via a 2x5 pin connector (JST B10B-PHDSSLFSN, mating connector: PHDR-10VS). There are two ways to use this connector. Default functionality is the familiar audio in, audio out, and microphone. OS dependent device drivers can switch these signals to support a 5.1 output; thus in this mode no audio input signals are available.

Signals "SPDIFI" and "SPDIFO" provide digital input and output. If a transformation to a coaxial or optical connector is necessary this must be performed externally.

Pinout audio 2x5 pin connector:

Description	Name	Pin	Name	Description
digital output SPDIF	SPDIFO	1	6	3.3V
digital input SPDIF	SPDIFI	2	7	S_AGND
sound output right / front output right	LOUT_R / FRONT_R	3	8	LOUT_L / FRONT_L
AUX input right / rear output right	AUXA_R / REAR_R	4	9	AUXA_L / REAR_L
microphone input 1 / center output	MIC1 / CENTER	5	10	MIC2 / LFE

4.14 SATA Interfaces

The CB3051 provides two SATA interfaces allowing transfer rates of up to 3 Gbit per second. These interfaces are made available via two 7 pin connectors. The required settings are made in the BIOS setup.

Pin	Name	Description
1	GND	ground
2	SATA1TX	SATA1 transmit +
3	SATA1TX#	SATA1 transmit -
4	GND	ground
5	SATA1RX	SATA1 receive +
6	SATA1RX#	SATA1 receive -
7	GND	ground

Pin	Name	Description
1	GND	ground
2	SATA2TX	SATA2 transmit +
3	SATA2TX#	SATA2 transmit -
4	GND	ground
5	SATA2RX	SATA2 receive +
6	SATA2RX#	SATA2 receive -
7	GND	ground

4.15 IDE Interface

The primary IDE interface is a standard IDC socket connector with a spacing of 2 mm. All commercial IDE devices are supported but an adapter to connect may be necessary. The required settings are made in the BIOS setup.

CAUTION

Pins are not keyed! Please be sure to connect the cable properly, otherwise you risk damaging the IDE interface, the CPU and the drive, voiding respective warranties.

Jumper settings: The board ships with pins 1 & 2 shorted. This is the "standard" mode which lets the IDE device and the controller negotiate the optimal transfer mode automatically. This is the best setting in most situations. However, in some cases the automatic detection results in PIO-mode transfer even though the setup would allow for UDMA. In such cases, UDMA mode can be enforced by shorting pins 2 & 3.

CAUTION

If you enforce UDMA mode in configurations which are not capable of running at that speed (e.g. due to inappropriate or too long cable), you'll end up with I/O-errors and loss of data!

Pinout for primary IDE

Description	Name	Pin	Pin	Name	Description
reset	PRST#	1	2	GND	ground
data bit 7	PDD7	3	4	PDD8	data bit 8
data bit 6	PDD6	5	6	PDD9	data bit 9
data bit 5	PDD5	7	8	PDD10	data bit 10
data bit 4	PDD4	9	10	PDD11	data bit 11
data bit 3	PDD3	11	12	PDD12	data bit 12
data bit 2	PDD2	13	14	PDD13	data bit 13
data bit 1	PDD1	15	16	PDD14	data bit 14

ground	GND	19	20	N/C	reserved
DMA request signal	PDDREQ	21	22	GND	ground
write signal	PDIOW#	23	24	GND	ground
read signal	PDIOR#	25	26	GND	ground
ready signal	PDRDY	27	28	N/C	reserved

Description	Name	Pin		Name	Description
DMA acknowledge signal	PDDACK#	29	30	GND	ground
interrupt signal	PDIRQ	31	32	N/C	reserved
address bit 1	PDA1	33	34	PDMA66EN	enable UDMA66
address bit 0	PDA0	35	36	PDA2	address bit 2
chip select signal 0	PDSC0#	37	38	PDCS1#	chip select signal 1
LED	PHDLED	39	40	GND	ground
supply HDD 5V	VCC	41	42	VCC	supply HDD 5V
ground	GND	43	44	N/C	reserved

4.16 Serial Interface COM1

The serial interface COM1 is made available via a 9-pin standard DSUB-connector. According to the product order, TTL level signals or RS232 standard signals are provided.

The port address and the interrupt are set via the BIOS setup.

Pinout serial port (DSUB connector):

Description	Name	Pin	Name	Description
data carrier detect	DCD	1	DSR	data set ready
receive data	RXD	2	RTS	request to send
transmit data	TXD	3	CTS	clear to send
data terminal ready	DTR	4	RI	ring indicator
ground	GND	5		

4.17 Serial Ports COM2 through COM4

There are three more serial interfaces on the board. Of these, COM3 is available through the power connector (cf. p. 18). COM2 and COM4 are made available via a 2x5 pin connector each (JST B10B-PHDSSLFSN, mating connector: PHDR-10VS). However, if the board has a touch screen interface, COM4 is used internally. On these boards, the COM4 connector is either not populated or it is used for mouse and keyboard signals (see pinning below). Signals default to RS232 level but can be ordered as TTL level also.

The port address and the interrupt are set via the BIOS setup.

Description	Name	Pin	Name	Description	
data carrier detect	DCD	1	6	DSR	data set ready
receive data	RXD	2	7	RTS	request to send
transmit data	TXD	3	8	CTS	clear to send
data terminal ready	DTR	4	9	RI	ring indicator
ground	GND	5	10	VCC	5 volt supply

Alternative pinout of COM-connector when touchscreen feature is present:

Description	Name	Pin	Name	Description	
keyboard clock	KCLK	1	6	MCLK	mouse clock
keyboard data	KDAT	2	7	MDAT	mouse data
reserved	N/C	3	8	N/C	reserved
reserved	N/C	4	9	N/C	reserved
ground	GND	5	10	VCC	5 volt supply

4.18 SMB/I2C

The CB3051 can communicate with external devices via the SMBus protocol or the I2C protocol. The signals for these protocols are available through a 2x5 pin connector (JST B10B-PHDSLSFSN, mating connector: PHDR-10VS). The SMBus signals are processed by the chipset, the I2C signals are processed by the SIO unit.

Pinout SMBus/I2C connector:

Description	Name	Pin	Name	Description
3.3 volt supply	3.3V	1	6	GND
SMBus clock	SMBCLK	2	7	SMBDAT
SMBus alarm	SMBALRT#	3	8	SVCC
I2C bus clock	I2CLK	4	9	I2DAT
5 volt supply	VCC	5	10	GND

4.19 Mini-PCI

The CB3051 allows you to add expansion cards complying to the Mini-PCI standard (type III). One such card can be inserted into the Mini-PCI slot available on the board.

Description	Name	Pin	Pin	Name	Description
reserved	N/C	1	2	N/C	reserved
reserved	N/C	3	4	N/C	reserved
reserved	N/C	5	6	N/C	reserved

4.20 GPIO

The General Purpose Input/Output interface is made available through a 2x10 pin connector (JST B20B-PHDSLSFSN, mating connector: PHDR-20VS). To make use of this interface the SIO unit must be programmed accordingly. Please refer to your distributor for information on available software support.

Description	Name	Pin	Pin	Name	Description
5 volt supply	VCC	1	11	VCC	5 volt supply
GP input/output 10	GPIO10	2	12	GPIO20	GP input/output 20
GP input/output 11	GPIO11	3	13	GPIO21	GP input/output 21
GP input/output 12	GPIO12	4	14	GPIO22	GP input/output 22
GP input/output 13	GPIO13	5	15	GPIO23	GP input/output 23
GP input/output 14	GPIO14	6	16	GPIO24	GP input/output 24
GP input/output 15	GPIO15	7	17	GPIO25	GP input/output 25
GP input/output 16	GPIO16	8	18	GPIO26	GP input/output 26
GP input/output 17	GPIO17	9	19	GPIO27	GP input/output 27
ground	GND	10	20	GND	ground

4.21 Fan Connectors

Two 3 pin connectors are available for controlling and monitoring external fans (12 volt). For the monitoring the fans must provide a corresponding speed signal.

Pinout fan connector:

Pin	Name	Description
1	GND	ground
2	12V	12 volt supply regulated
3	TACHO	fan monitoring signal

5 BIOS Settings

5.1 Remarks for Setup Use

In a setup page, standard values for its setup entries can be loaded. Fail-safe defaults are loaded with F6 and optimized defaults are loaded with F7. These standard values are independent of the fact that a board has successfully booted with a setup setting before.

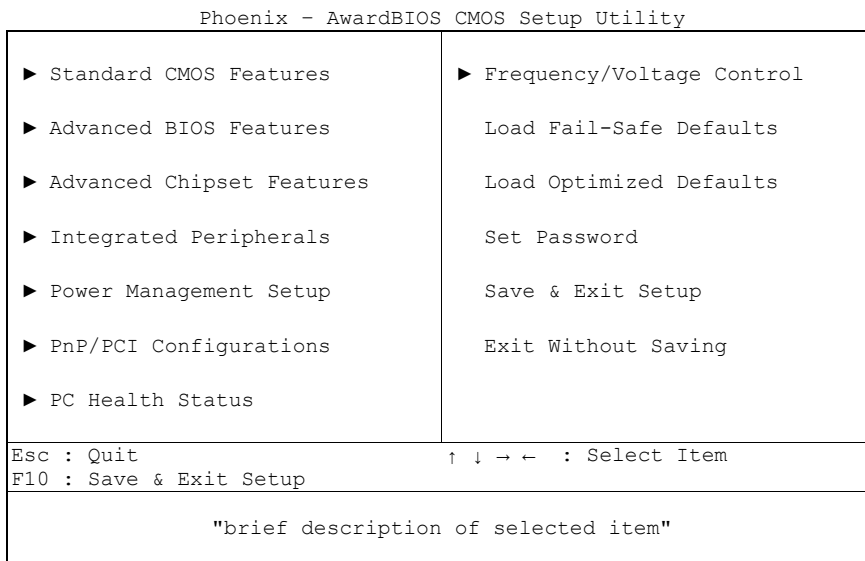

This is different if these defaults are called from the Top Menu. Once a setup setting was saved, which subsequently leads to a successful boot process, those values are loaded as default for all setup items afterwards.

See also the chapters "Load Fail-Safe Defaults" (5.10) and "Load Optimized Defaults" (5.11).

i **NOTE**

BIOS features and setup options are subject to change without notice. The settings displayed in the screenshots on the following pages are meant to be examples only. They do not represent the recommended settings or the default settings. Determination of the appropriate settings is dependent upon the particular application scenario in which the board is used.

5.2 Top Level Menu

The sign „▶“ in front of an item means that there is a sub menu.

The „x“ sign in front of an item means, that the item is disabled but can be enabled by changing or selecting some other item (usually somewhere above the disabled item on the same screen).

Use the arrow buttons to navigate from one item to another. For selecting an item press Enter which will open either a sub menu or a dialog screen.

5.11 Load Fail-Safe Defaults

If this option is chosen, the last working setup is loaded from flash. Working means that the setup setting has already led to a successful boot process.

At the first setting of the BIOS setup, safe values are loaded which lets the board boot. This status is reached again, if the board is reprogrammed with the corresponding flash-program and the required parameters.

5.12 Load Optimized Defaults

This option applies like described under “Remarks for Setup Use” (5.1).

At first start of the BIOS, optimized values are loaded from the setup, which are supposed to make the board boot. This status is achieved again, if the board is reprogrammed using the flash program with the required parameters.

5.13 Set Password

Here you can enter a password to protect the BIOS settings against unauthorized changes. Use this option with care! Forgotten or lost passwords are a frequent problem.

5.14 Save & Exit Setup

Settings are saved and the board is restarted.

5.15 Exit Without Saving

This option leaves the setup without saving any changes.

6 BIOS update

If a BIOS update becomes necessary, the program "AWDFLASH.EXE" from Phoenix Technologies is used for this. It is important, that the program is started from a DOS environment without a virtual memory manager such as for example "EMM386.EXE". In case such a memory manager is loaded, the program will stop with an error message.

The system must not be interrupted during the flash process, otherwise the update is stopped and the BIOS is destroyed afterwards.

The program should be started as follows:

```
awdflash [biosfilename] /sn /cc /cp
```

/sn	Do not save the current BIOS
/cc	Clear the CMOS
/cp	Clear the PnP information

The erasure of CMOS and PnP is strongly recommended. This ensures, that the new BIOS works correctly and that all chipset registers, which were saved in the setup, are reinitialized through the BIOS. DMI should only be erased (option /cd) if the BIOS supplier advises to do so.

A complete description of all valid parameters is shown with the parameter "?".

In order to make the updating process run automatically, the parameter "/py" must be added. This parameter bypasses all security checks during programming.

CAUTION

Updating the BIOS in an improper way can render the board unusable. Therefore, you should only update the BIOS if you really need the changes/corrections which come with the new BIOS version.

CAUTION

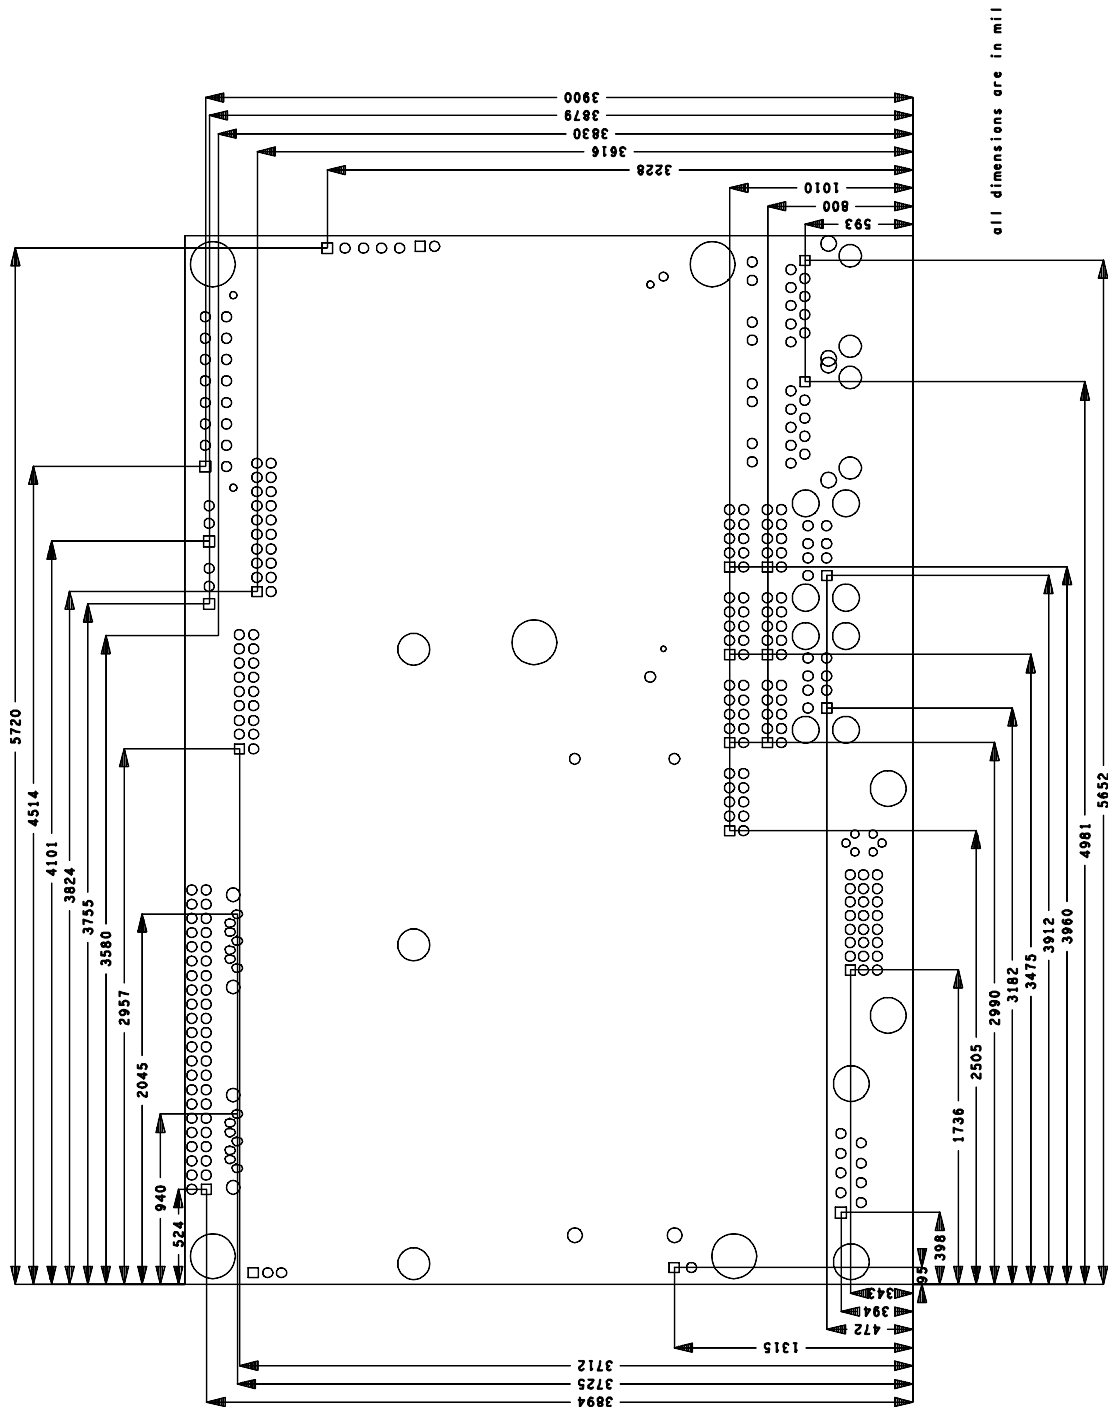

Before you proceed to update the BIOS you need to make absolutely sure that you have the right BIOS file which was issued for the exact board and exact board revision that you wish to update. If you try to update the BIOS using the wrong file the board will not start up again.

7 Mechanical Drawings

7.1 PCB: Mounting Holes

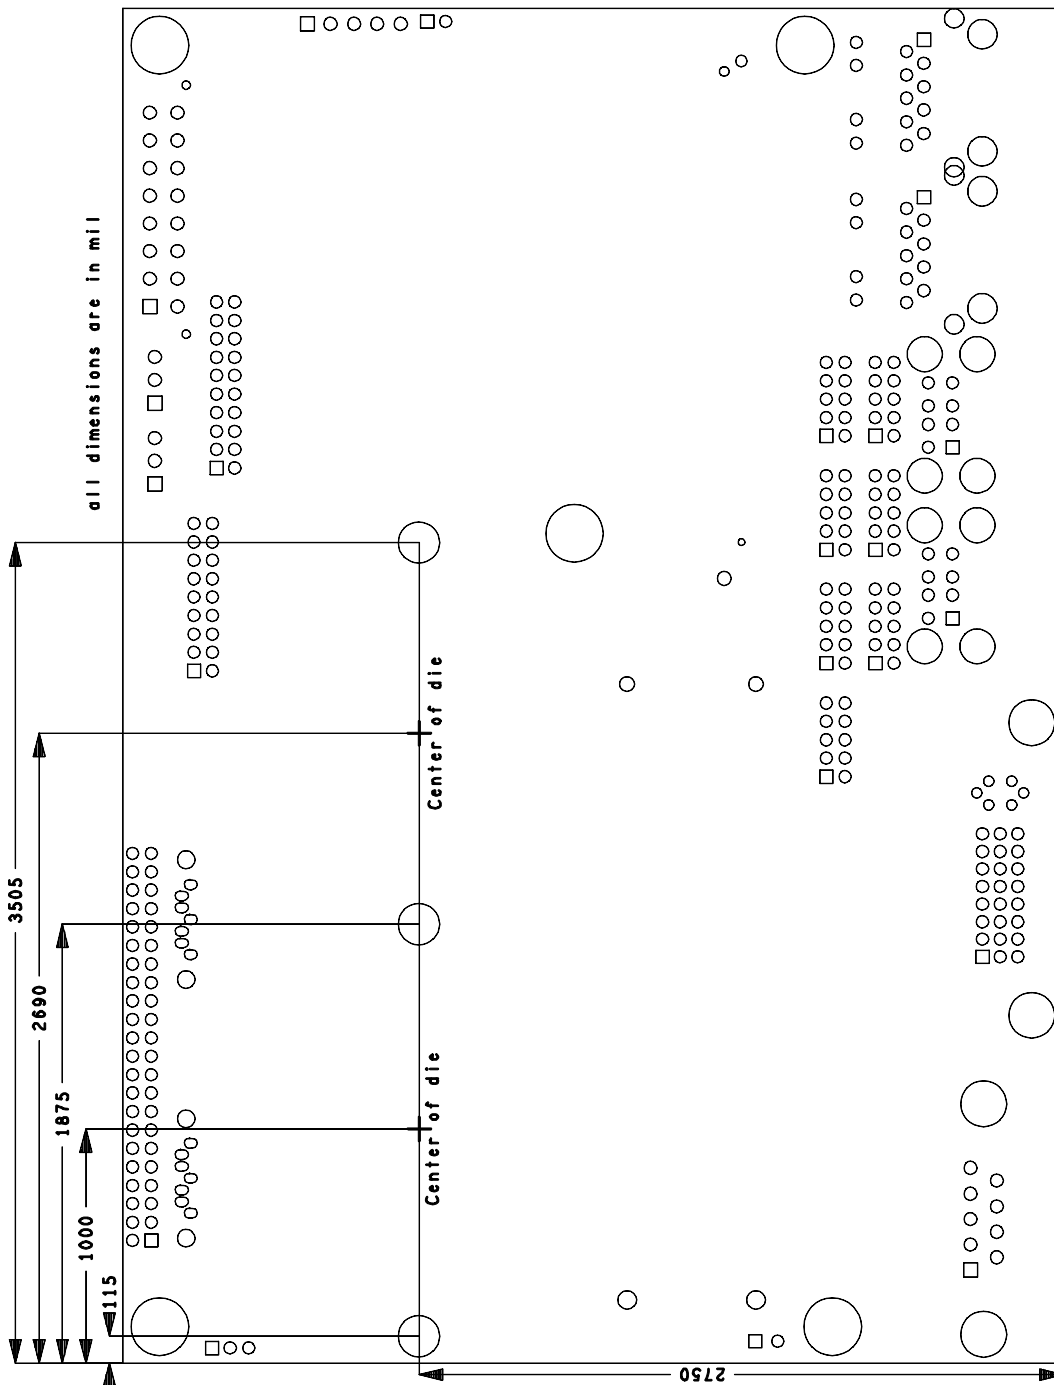

7.2 PCB: Pin 1 Dimensions

7.3 PCB: Heat Spreader

i **NOTE**

All dimensions are in mil (1 mil = 0,0254 mm)

8 Technical Data

8.1 Electrical Data

Power Supply:

Board:	5 Volt +/- 5% (5 Volt Suspend / 12 Volt Fan)
RTC:	>= 3 Volt

Electric Power Consumption:

RTC:	<= 10 μ A
------	---------------

8.2 Environmental Conditions

Temperature Range:

Operating:	0°C to +60°C (extended temperature on request)
Storage:	-25°C up to +85°C
Shipping:	-25°C up to +85°C, for packaged boards

Temperature Changes:

Operating:	0.5°C per minute, 7.5°C per 30 minutes
Storage:	1.0°C per minute
Shipping:	1.0°C per minute, for packaged boards

Relative Humidity:

Operating:	5% up to 85% (non condensing)
Storage:	5% up to 95% (non condensing)
Shipping:	5% up to 100% (non condensing), for packaged boards

Shock:

Operating:	150m/s ² , 6ms
Storage:	400m/s ² , 6ms
Shipping:	400m/s ² , 6ms, for packaged boards

Vibration:

Operating:	10 up to 58Hz, 0.075mm amplitude
	58 up to 500Hz, 10m/s ²
Storage:	5 up to 9Hz, 3.5mm amplitude
	9 up to 500Hz, 10m/s ²
Shipping:	5 up to 9Hz, 3.5mm amplitude
	9 up to 500Hz, 10m/s ² , for packaged boards

CAUTION

Shock and vibration figures pertain to the motherboard alone and do not include additional components such as heat sinks, memory modules, cables etc.

8.3 Thermal Specifications

The board is specified to operate in an environmental temperature range from 0°C to +60°C (extended temperature on request). Maximum die temperature is 100°C. To keep the processor under this threshold an appropriate cooling solution needs to be applied. This solution has to take typical and maximum power consumption into account. The maximum power consumption may be twice as high and should be used as a basis for the cooling concept. Additional controllers may also affect the cooling concept. The power consumption of such components may be comparable to the consumption of the processor.

The board design includes thermal solution mounting points that will provide the best possible thermal interface between die and solution. Since we take thermal solutions seriously we have several advanced, aggressive cooling solutions in our product portfolio. Please contact your sales representative to order or discuss your thermal solution needs.

CAUTION

The end customer has the responsibility to ensure that the die temperature of the processor does not exceed 100°C. Permanent overheating may destroy the board!

In case the temperature exceeds 100°C the environmental temperature must be reduced. Under certain circumstances sufficient air circulation must be provided.

9 Support and Service

Beckhoff and their partners around the world offer comprehensive support and service, making available fast and competent assistance with all questions related to Beckhoff products and system solutions.

9.1 Beckhoff's Branch Offices and Representatives

Please contact your Beckhoff branch office or representative for local support and service on Beckhoff products.

The addresses of Beckhoff's branch offices and representatives around the world can be found on her internet pages: <http://www.beckhoff.com>

You will also find further documentation for Beckhoff components there.

9.2 Beckhoff Headquarters

Beckhoff Automation GmbH
Eiserstr. 5
33415 Verl
Germany

phone: +49(0)5246/963-0
fax: +49(0)5246/963-198
e-mail: info@beckhoff.com
web: www.beckhoff.com

9.2.1 Beckhoff Support

Support offers you comprehensive technical assistance, helping you not only with the application of individual Beckhoff products, but also with other, wide-ranging services:

- support
- design, programming and commissioning of complex automation systems
- and extensive training programs for Beckhoff system components

hotline: +49(0)5246/963-157
fax: +49(0)5246/963-9157
e-mail: support@beckhoff.com

9.2.2 Beckhoff Service

The Beckhoff Service Center supports you in all matters of after-sales service:

- on-site service
- repair service
- spare parts service
- hotline service

hotline: +49(0)5246/963-460
fax: +49(0)5246/963-479
e-mail: service@beckhoff.com

I Annex: Post-Codes

Code	Description
01h	The Xgroup-program code is written in the random access memory from address 1000:0 onwards.
03h	Initialise Variable/Routine "Superio_Early_Init".
05h	1. Cancel display 2. Cancel CMOS error flag
07h	1. Cancel 8042 (keyboard controller) Interface Register 2. Initialising and self testing of 8042 (keyboard controller)
08h	1. Test of special keyboard controllers (Winbond 977 super I/O Chip-series). 2. Enabling of the keyboard-interface register
0Ah	1. Disabling of the PS/2 mouse interface (optional). 2. Auto-detection of the connectors for Keyboard and mouse, optional: swap of PS/2 mouse ports and PS/2 interfaces.
0Eh	Test of the F000h-memory segment (Read/Write ability). In case of an error a signal will come out of the loud speakers.
10h	Auto-detection of the flash-rom-type and loading of the suitable Read/Write program into the run time memory segment F000 (it is required for ESCD-data & the DMI-pool-support).
12h	Interface-test of the CMOS RAM-logic (walking 1's"-algorithm). Setting of the power status of the real-time-clock (RTC), afterwards test of register overflow.
14h	Initialising of the chip-set with default values. They can be modified through a software (MODBIN) by the OEM-customer.
16h	Initialise Variable/Routine "Early_Init_Onboard_Generator".
18h	CPU auto-detection (manufacturer, SMI type (Cyril or Intel), CPU-class (586 or 686).
1Bh	Initialising if the interrupt pointer table. If nothing else is pretended, the hardware interrupts will point on "SPURIOUS_INT_HDLR and the software interrupts will point on SPURIOUS_soft_HDLR.
1Dh	Initialise Variable/Routine EARLY_PM_INIT.
1Fh	Load the keyboard table (Notebooks)
21h	Initialising of the hardware power management (HPM) (Notebooks)
23h	1. Test the validity of the RTC-values (Example: "5Ah" is an invalid value for an RTC-minute). 2. Load the CMOS-values into the BIOS Stack. Default-values are loaded if CMOS-checksum errors occur. 3. Preparing of the BIOS 'resource map' for the PCI & plug and play configuration. If ESCD is valid, take into consideration the ESCD's legacy information. 4. Initialise the onboard clock generator. Clock circuit at non-used PCI- and DIMM slots. 5. First initialising of PCI-devices: assign PCI-bus numbers - alot memory- & I/O resources - search for functional VGA-controllers and VGA-BIOS and copy the latter into memory segment C000:0 (Video ROM Shadow).
27h	Initialise cache memory for INT 09
29h	1. Program the CPU (internal MTRR at P6 and PII) for the first memory address range (0-640K). 2. Initialising of the APIC at CPUs of the Pentium-class. 3. Program the chip-set according to the settings of the CMOS-set-up (Example: Onboard IDE-controller). 4. Measuring of the CPU clock speed. 5. Initialise the video BIOS.
2Dh	1. Initialise the "Multi-Language"-function of the BIOS 2. Soft copy, e.g. Award-Logo, CPU-type and CPU clock speed...
33h	Keyboard-reset (except super I/O chips of the Winbond 977 series)
3Ch	Test the 8254 (timer device)
3Eh	Test the interrupt Mask bits of IRQ-channel 1 of the interrupt controller 8259.
40h	Test the interrupt Mask bits of IRQ-channel 2 of the interrupt controller 8259
43h	Testing the function of the interrupt controller (8259).
47h	Initialise EISA slot (if existent).

Code	Description
49h	1. Determination of the entire memory size by revising the last 32-Bit double word of each 64k memory segment. 2. Program "write allocation" at AMD K5-CPU's.
4Eh	1. Program MTRR at M1 CPU's 2. Initialise level 2-cache at CPU's of the class P6 and set the "cacheable range" of the random access memory. 3. Initialise APIC at CPU's of the class P6. 4. Only for multiprocessor systems (MP platform): Setting of the "cacheable range" on the respective smallest value (for the case of non-identical values).
50h	Initialise USB interface
52h	Testing of the entire random access memory and deleting of the extended memory (put on "0")
55h	Only for multi processor systems (MP platform): Indicate the number of CPU's.
57h	1. Indicate the plug and play logo 2. First ISA plug and play initialising – CSN-assignment for each identified ISA plug and play device.
59h	Initialise TrendMicro anti virus program code.
5Bh	(Optional:) Indication of the possibility to start AWDFLASH.EXE (Flash ROM programming) from the hard disk.
5Dh	1. Initialise Variable/Routine Init_Onboard_Super_IO. 2. Initialise Variable/Routine Init_Onboard_AUDIO.
60h	Release for starting the CMOS set-up (this means that before this step of POST, users are not able to access the BIOS set-up).
65h	Initialising of the PS/2 mouse.
67h	Information concerning the size of random access memory for function call (INT 15h with AX-Reg. = E820h).
69h	Enable level 2 cache
6Bh	Programming of the chip set register according to the BIOS set-up and auto-detection table.
6Dh	1. Assignment of resources for all ISA plug and play devices. 2. Assignment of the port address for onboard COM-ports (only if an automatic junction has been defined in the setup).
6Fh	1. Initialising of the floppy controller 2. Programming of all relevant registers and variables (floppy and floppy controller).
73h	Optional feature: Call of AWDFLASH.EXE if: - the AWDFLASH program was found on a disk in the floppy drive. - the shortcut ALT+F2 was pressed.
75h	Detection and installation of the IDE drives: HDD, LS120, ZIP, CDROM...
77h	Detection of parallel and serial ports.
7Ah	Co-processor is detected and enabled.
7Fh	1. Switch over to the text mode, the logo output is supported. - Indication of possibly emerged errors. Waiting for keyboard entry. - No errors emerged, respective F1 key was pressed (continue): Deleting of the EPA- or own logo.
82h	1. Call the pointer to the "chip set power management". 2. Load the text font of the EPA-logo (not if a complete picture is displayed) 3. If a password is set, it is asked here.
83h	Saving of the data in the stack, back to CMOS.
84h	Initialising of ISA plug and play boot drives (also Boot-ROMs)
85h	1. Final initialising of the USB-host. 2. At network PC's (Boot-ROM): Construction of a SYSID structure table 3. Backspace the scope presentation into the text mode 4. Initialise the ACPI table (top of memory). 5. Initialise and link ROMs on ISA cards 6. Assignment of PCI-IRQs 7. Initialising of the advanced power management (APM) 8. Set back the IRQ-register.

Code	Description
93h	Reading in of the hard disk boot sector for the inspection through the internal anti virus program (trend anti virus code)
94h	<ol style="list-style-type: none"> 1. Enabling of level 2 cache 2. Setting of the clock speed during the boot process 3. Final initialising of the chip set. 4. Final initialising of the power management. 5. Erase the onscreen and display the overview table (rectangular box). 6. Program "write allocation" at K6 CPUs (AMD) 7. Program "write combining" at P6 CPUs (INTEL)
95h	<ol style="list-style-type: none"> 1. Program the changeover of summer-and winter-time 2. Update settings of keyboard-LED and keyboard repeat rates
96h	<ol style="list-style-type: none"> 1. Multi processor system: generate MP-table 2. Generate and update ESCD-table 3. Correct century settings in the CMOS (20xx or 19xx) 4. Synchronise the DOS-system timer with CMOS-time 5. Generate an MSIRQ-Routing table..
C0h	Chip set initialising: <ul style="list-style-type: none"> - Cut off shadow RAM - Cut off L2 cache (apron 7 or older) - Initialise chip set register
C1h	Memory detection: <ul style="list-style-type: none"> Auto detection of DRAM size, type and error correction (ECC or none) Auto detection of L2 cache size (apron 7 or older)
C3h	Unpacking of the packed BIOS program codes into the random access memory.
C5h	Copying of the BIOS program code into the shadow RAM (segments E000 & F000) via chipset hook.
CFh	Testing of the CMOS read/write functionality
FFh	Boot trial over boot-loader-routine (software-interrupt INT 19h)

II Annex: Resources

IO Range

The used resources depend on setup settings.

The given values are ranges, which are fixed by AT compatibility. Other IO ranges are used, which are dynamically adjusted by Plug & Play BIOS while booting.

Address	Function
0-FF	Reserved IO area of the board
170-17F	IDE2
1F0-1F7	IDE1
278-27F	LPT2
2E8-2EF	COM4
2F8-2FF	COM2
370-377	FDC2
378-37F	LPT1
3BC-3BF	LPT3
3E8-3EF	COM3
3F0-3F7	FDC1
3F8-3FF	COM1

Memory Range

The used resources depend on setup settings.

If the entire range is clogged through option ROMs, these functions do not work anymore.

Address	Function
A0000-BFFFF	VGA RAM
C0000-CFFFF	VGA BIOS
D0000-DFFFF	AHCI BIOS / RAID / PXE (if available)
E0000-EFFFF	System BIOS while booting
F0000-FFFFF	System BIOS

Interrupt

The used resources depend on setup settings.

The listed interrupts and their use are given through AT compatibility.

If interrupts must exclusively be available on the ISA side, they have to be reserved through the BIOS setup.

The exclusivity is not given and not possible on the PCI side.

Address	Function
IRQ0	Timer
IRQ1	PS/2 Keyboard
IRQ2 (9)	(COM3)
IRQ3	COM1
IRQ4	COM2
IRQ5	(COM4)
IRQ6	FDC
IRQ7	LPT1
IRQ8	RTC
IRQ9	
IRQ10	
IRQ11	
IRQ12	PS/2 Mouse

Address	Function
IRQ13	FPU
IRQ14	IDE Primary
IRQ15	(IDE Secondary)

PCI Devices

All listed PCI devices exist on the board. Some PCI devices or functions of devices may be disabled in the BIOS setup. Once a device is disabled other devices may get PCI bus numbers different from the ones listed in the table.

AD	INTA	REQ	PCI	Dev.	Fct.	Controller / Slot
16	-	-	0	0	0	Host Bridge (GMCH) ID27A0
18	A	-	0	2	0	VGA Graphics (GMCH) ID27A2

21	A	0	m	5	-	mPCI Slot 1
22	B	1	m	6	-	External Slot 2
23	C	2	m	7	-	External Slot 3
24	D	3	m	8	-	External Slot 4
24	(E)	-	n	8	0	LAN Intel 82562GZ (ICH) ID27DC

SMB Devices

The following table contains all reserved SM-Bus device addresses in 8-bit notation. Note that external devices must not use any of these addresses even if the component mentioned in the table is not present on the motherboard.

Address	Function
10-11	Standard slave address
40-41	GPIO
60-61	BIOS internal
70-73	POST code output
88-89	BIOS-defined slave address
A0-A1	DIMM 1
A2-A3	DIMM 2
A4-AF	BIOS internal
B0-BF	BIOS internal
D2-D3	Clock
